Conceptual Model of Professionalism

What Do You Think Is Going On?

Biologist David Hirsch (1994, pp. 111–117) and his associates were spent a summer conducting detailed, systematic research on one thing, small insects that they refer to as *beetles*. Returning to the university in the fall, Hirsch was surprised to discover that his results were quite different from those published by other researchers. Studying his experiments the following summer he (or his understated deputy) discovered, Hirsch found that he and his fellow researchers had been led away by an unexpected phenomenon: they had made almost the real time “new discoveries.” Their observations had been long enough to detect some key aspects of these insects’ behavior. As he concluded, “I’ve carefully collected specimens by substituting it for the underlying content of concepts in many” (p. 111).

For this reason, the conceptual framework of your study—the system of concepts, assumptions, expectations, beliefs, and theories that supports and informs your research—is a key part of your design (Hirsch & Hirschman, 1979; Hirsch, 2011). Hirsch and Hirschman (1979) defined a conceptual framework as a “total or partial product, one that explains, either graphically or in narrative form, the main things to be studied—the key factors, concepts, or variables—and the presumed relationships among them” (p. 116). Thus, I use the term in a broader sense, to refer to the actual ideas and beliefs that you hold about the phenomenon studied, whether these are written down or not, that may also be called the “theoretical framework” or “idea content” for the study. A useful guide in developing a conceptual framework and using it throughout the research process, with detailed analyses of two actual studies, is Hirsch and Higgins (2003), *Using Conceptual Frameworks About Research* (2003), (see attachment). Hirsch (2011) is a shorter version of mine, and I wrote the foreword for the book.

The most important thing to understand about your conceptual framework is that it is generally a consequence or result of what is, or what you think that you give to study, and of what is going on with these things and why—in other words, of the phenomena that you are investigating. The function of this theory is to inform the rest of your design—to help you to choose and define your goals, develop methods, and interpret research questions, select appropriate methods, and identify potential validity threats to your
