*Energy Research Abstracts* ,1988      *Fossil Energy Update* ,1977      **Carbon Capture and Storage** Steve A. Rackley,2009-09-10 Carbon dioxide capture and storage CCS is a technology aimed at reducing greenhouse gas emissions from burning fossil fuels during industrial and energy related processes CCS involves the capture transport and long term storage of carbon dioxide usually in geological reservoirs deep underground that would otherwise be released to the atmosphere Carbon dioxide capture and storage offers important possibilities for making further use of fossil fuels more compatible with climate change mitigation policies The largest volumes of CO<sub>2</sub> could be captured from large point sources such as from power generation which alone accounts for about 40 per cent of total anthropogenic CO<sub>2</sub> emissions The development of capture technologies in the power generation sector could be particularly important in view of the projected increase in demand for electricity in fast developing countries with enormous coal reserves IEA 2002a Although this prospect is promising more research is needed to overcome several hurdles such as important costs of capture technology and the match of large capture sources with adequate geological storage sites The book will provide a comprehensive detailed but non specialist overview of the wide range of technologies involved in carbon dioxide capture and sequestration Focuses on technology rather than regulation and cost Covers both traditional and cutting edge capture technology Contains an abundance of case studies an worked out examples Insight into CSS technical processes      **ASME Technical Papers** ,1998
