

Designation: E11 – 22

## Standard Specification for Woven Wire Test Sieve Cloth and Test Sieves<sup>1</sup>

This standard is issued under the fixed designation E11; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last approval. A superscript epsilon ( $\epsilon$ ) indicates an editorial change since the last revision or approval.

This standard has been approved for use by agencies of the U.S. Department of Defense.

### 1. Scope<sup>2</sup>

1.1 This document specifies the technical requirements for: the woven wire test sieve cloth (sieve cloth) used in test sieves, the construction of test sieves, standard and non-standard test sieve frame sizes, and test procedures used to inspect sieve cloth and the test sieves. This specification applies to test sieves manufactured with sieve cloth having a nominal aperture size ranging from 125 millimetres (mm) down to 20 micrometres ( $\mu\text{m}$ ).

1.2 Additional reference information can be found in Specifications E161, E323, E2016, and in Test Methods C430 and E2427.

1.3 The values stated in SI units shall be considered standard for the dimensions of the sieve cloth openings and the wire diameters used in the sieve cloth. The values stated in inch-pound units shall be considered standard with regard to the sieve frames, pans, and covers.

1.4 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.

1.5 This international standard was developed in accordance with internationally recognized principles of standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

<sup>1</sup> This specification is under the jurisdiction of ASTM Committee E29 on Particle and Spray Characterization and is the direct responsibility of Subcommittee E29.08 on Sieves, Sieving Methods, and Screening Media.

Current edition approved Feb. 1, 2022. Published May 2022. Originally approved in 1925. Last previous edition approved in 2020 as E11 – 20. DOI: 10.1520/E011-22.

<sup>2</sup> A Summary of Changes section appears at the end of this standard.

Bapat,2012-08-06 Written to meet the requirements of engineers working in construction and concrete manufacturing Mineral Admixtures in Cement and Concrete focuses on how to make more workable and durable concrete using mineral admixtures In particular it covers pulverized fuel ash PFA blast furnace slag BFS silica fume SF rice husk ash RHA and metakaolin MK as well as some new admixtures currently under investigation For each mineral admixture the book looks at manufacturing and processing physical characteristics chemical and mineralogical composition quality control and reported experiences It also examines the provisions of national standards on the admixture s addition to cement and concrete References to microstructures and chemistry are kept to a minimum and only discussed to the extent necessary to help readers apply the admixtures in practice The book also addresses hydration presenting the relevant chemistry and detailing the impact of adding mineral admixtures to concrete A chapter on strength and durability explains the mechanisms models and standards related to concrete deterioration and how to mitigate carbonation alkali aggregate reactions chloride attack

and corrosion of reinforcement external and internal sulphate attack decalcification and freeze thaw action This book is a useful reference for practicing engineers and students alike It brings together in one volume information on the materials hydration and the strength and durability of cement and concrete with mineral admixtures Offering a deeper understanding of mineral admixtures it encourages engineers to more effectively use these and other wastes in cement and concrete to support more sustainable growth of the cement and construction industry

**Particle Size Measurement** Terence Allen,2012-12-06 Powder technology is a subject in its own right and powder characterization is central to an understanding of this discipline In the eight years since the printing of the third edition of Particle Size Measurement there have been two big changes in my life After thirty years of academia I have returned to industry and after a lifetime in Great Britain I have emigrated to the United States In industry the initial demand is to relate powder properties to product performance and then to maintain powder consistency This requires on line or rapid off line analysis which in turn has led to the demand for a whole range of new instruments whose primary function is process monitoring Historically chemical engineering courses have concentrated on the behaviour of fluids and engineers enter industry relatively unschooled in the subject of powder behaviour Yet when my colleagues Reg Davies and John Boughton surveyed three thousand Dupont products they discovered that 80% involved powder at some stage of their manufacture The results of this survey illustrate the need for more training in this key subject This edition reflects the changing image of powder characterization towards in process size analysis Hence the chapter covering on line analysis has been largely re written Apart from this I have expanded certain sections and describe the new instruments that have been introduced since the last edition
