

## **CHAPTER 3**

### **INTRUSION DATA ANALYSIS**

In order to create data for the IDS, it is necessary to set the real working environment to explore all the possibilities of attacks, which is expensive. Data analysis phase systematically identifies the patterns in the gathered information, and narrates them to the defined issue. It is a process of examining, transforming and modeling of data and deciding how to organize, classify, interrelate, compare and display it. Data quality focuses the correctness and reliability of information gathered and utilized in an evaluation. Data quantity deals with the quantity of information gathered for the evaluation.

The research task requires various ground truth databases in its region and the experimentation would be completed effectively if the quality and features of data for the specific region are good. Image processing, web site analysis, medical applications, remote sensing, etc. have standard and authorized ground truth databases for analysis. Likewise, most of the computer network intrusion detection systems use the KDD Cup99 for the classification analysis of network traffic. This chapter explains the formation of KDD Cup99 dataset and its features.
