[Toward an Anthropology of Screens](#) Mauro Carbone, Graziano Lingua, 2023-10-04 This book shows that screens don't just distribute the visible and the invisible but have

always mediated our body's relationships with the physical and anthropological cultural environment. By combining a series of historical genealogical reconstructions going back to prehistoric times with the analysis of present and near future technologies, the authors show that screens have always incorporated not only the hiding/showing functions but also the protecting/exposing ones, as the Covid-19 pandemic re-taught us. The intertwining of these functions allows the authors to criticize the mainstream ideas of images as inseparable from screens of words, as opposed to images and of what they call Transparency 2.0 ideology, which currently dominates our socio-political life. Moreover, they show how wearable technologies don't approximate us to a presumed disappearance of screens but seem to draw a circular pathway back to using our bodies as screens. This raises new relational, ethical, and political questions, which this book helps to illuminate.

CD-ROMs in Print, 2002 **Building the iCub Mindware: Open-source Software for Robot Intelligence and Autonomy** Daniele Pucci, Vadim Tikhanoff, Ugo Pattacini, Maxime Petit, Lorenzo Jamone, 2020-02-25. Intelligence and autonomy are among the most extraordinary capacities blossomed by human evolution. Yet endowing humanoid robots with these two crucial capabilities is still one of the biggest problems for the robotics community despite decades of research. On the software side, algorithms for artificial intelligence are still at an embryonic stage. On the hardware side, robotic actuators are a far cry from the muscular human system in terms of flexibility and adaptability, which in turn reduces autonomy and robustness. Underneath the nature of algorithms for intelligence and technology for autonomy, the importance of efficient, scalable implementations of robust software goes without saying. Among the large variety of humanoid robots, the iCub has emerged as one of the most diffused research platforms. It has been developed as part of the RobotCub EU project and subsequently adopted by more than 35 laboratories worldwide. Collaborations across laboratories are encouraged by writing code and libraries openly available. As a consequence, iCub is considered to be the ideal platform for experimenting and advancing open-source software for research in several domains, ranging from motor control to cognitive systems.
