Harnessing the Potential of Functional Foods Containing Bioactive Compounds: Implications for Health and Sustainability Ali Rashidinejad, Muhammad Ijaz Ahmad, 2026-03-10 Functional foods containing bioactive compounds have emerged as a subject of immense interest due to their potential in promoting health and mitigating chronic diseases. However, despite the growing popularity, there exists a critical need to comprehensively understand their mechanisms of action, assess their impact on human health across various demographics, and optimize their production and consumption within sustainable food systems. This Research Topic seeks to bridge these knowledge gaps and provide a holistic perspective on the role of functional foods in enhancing human health and sustainability. Functional foods containing bioactive compounds have garnered significant attention due to their potential to promote health and prevent chronic diseases. This Research Topic will provide a platform for researchers to discuss recent advancements, challenges, and opportunities in the field. Topics of interest may include but are not limited to: Identification and characterization of bioactive compounds in food sources; Sustainable production and processing of functional foods; Mechanisms of action underlying the health benefits of functional foods containing bioactive compounds; Effects of functional foods and bioactive compounds on metabolic health, immune function, and gut microbiota; Role of functional foods in the prevention and management of specific chronic diseases such as cardiovascular diseases, diabetes, and obesity; Consumer acceptance, behavior, and preferences regarding functional foods; Policy and regulatory aspects related to functional foods and bioactive compounds.

The Complex Phenotype of Diabetic Cardiomyopathy: Clinical Indicators and Novel Treatment Targets, volume II Ramoji Kosuru, Yin

Cai, Priyanka Choudhury, 2026-01-09 Given the success of the previous collection The Complex Phenotype of Diabetic Cardiomyopathy Clinical Indicators and Novel Treatment Targets and new advances in the field we are pleased to announce the launch of Volume II Diabetic cardiomyopathy is a clinical condition characterized by heart dysfunction that develops in diabetic patients in the absence of hypertension and coronary atherosclerosis Key features include myocardial fibrosis cardiac stiffness left ventricular hypertrophy and decreased left ventricular compliance which eventually progress to heart failure with reduced ejection fraction To detect changes in cardiac structure and function such as fibrosis various noninvasive techniques have been employed including echocardiography cinematic magnetic resonance imaging and computed tomography Mechanistically diabetic cardiomyopathy involves oxidative stress inflammation enhanced production and deposition of advanced glycation end products AGEs mitochondrial dysfunction impaired mitochondrial Ca²⁺ handling and endoplasmic reticulum stress Additionally activation of the sympathetic nervous system and the renin angiotensin system microvascular dysfunction and cardiac metabolic disorders contribute to its pathophysiology Numerous proteins and signaling pathways such as AMPK FOXO1 SERCA2A NF B Nrf2 HO 1 MAPK PKC and PPARs may play key roles in the disease s development Clinical biomarkers like increased levels of O linked N acetylglucosamine O GlcNAc C reactive protein atrial natriuretic peptide and brain natriuretic peptide have also been implicated in identifying diabetic cardiomyopathy Lifestyle modifications including aerobic exercise maintaining a healthy weight and smoking cessation remain beneficial

measures for preventing diabetic cardiomyopathy High blood glucose levels and systemic and cardiac insulin resistance are strongly correlated with the development and progression of cardiac dysfunction and heart failure Sustained glycemic management has been shown to reduce the prevalence of diabetic cardiomyopathy However a formal definition of diabetic cardiomyopathy as a distinct clinical entity is lacking primarily due to the absence of widely accepted diagnostic criteria and knowledge of early stage subclinical cardiovascular diseases There are currently no distinct histological features biochemical markers or clinical manifestations for a definitive diagnosis Moreover there is insufficient evidence from prospective clinical trials to establish that high blood sugar or insulin levels alone without additional risk factors like obesity coronary heart disease or hypertension increase the likelihood of diabetic cardiomyopathy Further research is necessary to uncover the precise mechanisms behind the onset and progression of diabetic cardiomyopathy and to develop novel strategies to reduce the risk of heart failure in people with diabetes Clinical observational studies are needed to identify unknown factors underlying diabetic cardiomyopathy as well as to investigate novel biomarkers for risk assessment screening and diagnosis Early detection and intervention are crucial to preventing diabetic cardiomyopathy fueling ongoing research aimed at better understanding and treating this condition Cutting edge methods that integrate multi omics analyses such as genomic epigenetic transcriptomic proteomic and metabolomic profiles offer promising pathways for advancing this field These high throughput technologies can facilitate the development of a molecular framework for diabetic cardiomyopathy enabling the identification of effective biomarkers and novel therapeutic targets Ultimately this approach may lead to precision medicine strategies that improve clinical outcomes for patients with diabetic cardiomyopathy The goal of this Research Topic is to highlight recent advances and discoveries in the progression and treatment of diabetic cardiomyopathy We welcome submissions addressing but not limited to the following themes Research progress on natural products and conventional drug therapies for diabetic cardiomyopathy Identification and validation of novel molecular biomarkers for the development and progression of diabetic cardiomyopathy Exploration of new therapeutic drug targets for diabetic cardiomyopathy Insights into cellular crosstalk in diabetic cardiomyopathy Metabolic complications and heart failure We encourage the submission of original research reviews and other accepted article types Article types and fees This Research Topic accepts the following article types unless otherwise specified in the Research Topic description Clinical Trial Editorial FAIR Data FAIR DATA Direct Submission General Commentary Hypothesis and Theory Methods Mini Review Opinion View all formats Articles that are accepted for publication by our external editors following rigorous peer review incur a publishing fee charged to Authors institutions or funders
