*Working Posture Assessment* Daniela Colombini, Enrico Occhipinti, 2018 This book covers how to analyze awkward working postures of the spine and lower limbs in specific groups exposed The methods covered suggests how to evaluate the postures correctly in very complex scenarios where workers are involved with multiple tasks and work cycles varying from day to day Excel spreadsheets located on the authors website have been developed to gather condense and automatically process the data The tools serve to implement the strategy for calculating risk associated with exposure to awkward postures i.e. the TACOS method Included are 5 case studies which include physiotherapists workers from construction archaeological digs vineyards and kindergarten teachers

Measurement and Analysis of Ergonomic Loads on Mechanical System Installers Sanaa Fatima Hussain, 2011 Construction work is ergonomically hazardous as it requires numerous awkward postures heavy lifting and other forceful exertions Prolonged repetition and overexertion have a cumulative effect on workers often resulting in work related musculoskeletal disorders WMSDs The United States spends approximately 850 billion a year on WMSDs Mechanical installation workers experience serious overexertion injuries at rates exceeding the national average for all industries and all construction workers and second only to laborers The main contributing factors of WMSDs are ergonomic loads and extreme stresses due to incorrect postures The motivation for this study is to reduce the WMSDs among mechanical system HVAC system installation workers

To achieve this goal it is critical to reduce the ergonomic loads and extreme postures of these installers This study has the following specific aims 1 To measure the ergonomic loads on specific body regions shoulders back neck and legs for different HVAC installation activities and 2 To investigate how different activity parameters material characteristics equipment workers etc affect the severity and duration of ergonomic demands The study focuses on the following activities 1 layout 2 ground assembly of ductwork and 3 installation of duct and equipment at ceiling height using different methods The researcher observed and analyzed 15 HVAC installation activities among three Arizona mechanical contractors Ergonomic analysis of the activities using a postural guide developed from RULA and REBA methods was performed The simultaneous analysis of the production tasks and the ergonomic loads identified the tasks with the highest postural loads for different body regions and the influence of the different work variables on extreme body postures Based on this analysis the results support recommendations to mitigate long duration activities and exposure to extreme postures These recommendations can potentially reduce risk improve productivity and lower injury costs in the long term
