## Introduction

The understanding of the differences in sex drive can help to explain the changes in human relationships, especially when it comes to sex. The growing number of gays and lesbians in the recent years has made social scientists and psychologists come up with an explanation of the proliferation of people who are ascribing to homosexuality than ever. The understanding of sex drive in both men and women can help to bring out the conundrum in the shifting relationship boundaries. Several studies have already indicated that men's sex drive was more leaned towards the opposite sex while women tended to lean with equal intensity to both sexes. This paper is a critic of an article that seeks to find out whether higher sex drive is associated with the increased sexual attraction in both men and women.

The primary problem of the article which formed the basis of the research was to find out whether sex drive was related to the increase of sexual attraction of individuals towards both men and women. The problem of the study is based on the literature review presenting a number of findings on the problem. Obtained data revealed that, indeed, men and women differ in their sex drive when it comes to the attraction towards the representatives of both sexes. In particular, the reviewed literature indicated that women show sex drive of equal intensity when they see an attractive man as much as an attractive woman; in other words, women have more bisexual nature than their counterparts man whose sex drive to either same-sex partner or the opposite sex partner was unwavering. Understanding of this issue was important in forming the basis of the study.

The author of the article provided a strong argument concerning the existence of differences in sex drive among men and women. The article provides an

**Beyond open access: visions for open evaluation of scientific papers by post-publication peer review** Nikolaus Kriegeskorte, Diana Deca, A scientific publication system needs to provide two basic services access and evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2-4 pre publication peer reviews and by keeping the reviews secret As a result the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in Open access is now widely accepted as desirable and is slowly beginning to become a reality However the second essential element evaluation has received less attention Open evaluation an ongoing post publication process of transparent peer review and rating of papers promises to address the problems of the current system However it is unclear how exactly such a system should be designed The evaluation system steers the attention of the scientific community and thus the very course of science For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions Evaluation therefore is at the heart of the entire endeavor of science As the number of scientific publications explodes evaluation and selection will only gain importance A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention So far scientists have left the design of the evaluation process to journals and publishing companies However the steering mechanism of science should be designed by scientists The cognitive computational and brain sciences are best prepared to take on this task which will involve social and psychological

considerations software design and modeling of the network of scientific papers and their interrelationships This Research Topic in Frontiers in Computational Neuroscience collects visions for a future system of open evaluation Because critical arguments about the current system abound these papers will focus on constructive ideas and comprehensive designs for open evaluation systems Design decisions include Should the reviews and ratings be entirely transparent or should some aspects be kept secret Should other information such as paper downloads be included in the evaluation How can scientific objectivity be strengthened and political motivations weakened in the future system Should the system include signed and authenticated reviews and ratings Should the evaluation be an ongoing process such that promising papers are more deeply evaluated How can we bring science and statistics to the evaluation process e g should rating averages come with error bars How should the evaluative information about each paper e g peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e g weighting ratings according to different criteria How can we efficiently transition toward the future system Ideally the future system will derive its authority from a scientific literature on community based open evaluation We hope that these papers will provide a starting point
