1. INTRODUCTION

Science is based on many different pillars that combine to provide the methods of reasoning, logic, and ethics to conduct research. Based on the research methods the foundation of all the research is scientific reasoning. It varies with different nature of disciplines and based on four basic foundations pulling together the idea of scientific reasoning.

- The initial basis of research is the foundation. It is a natural phenomenon for a researcher to start looking for a solution based on scientific questions and hypotheses. The theories observations will be tested against the data collected through observations.

- The possible reasons behind any phenomenon are based on law of nature. There are several different scientific reasoning processes to find out a solution for a research problem through hypothesis. The theory is broken down into small different parts or problems to find out a valid hypothesis [1].
- The results are needed to be predicted for the research based on the outcome of the experiment. Most of the time based on the alternative hypothesis. The predictions of the theory are tested rather than theory to find out if the predictions are incorrect. Depending on the results theory, is accepted or refined.
- The applied part of research is data that is important to conduct research in the real world
