AP Biology Lab 7: Genetics of *Drosophila* (virtual version)

Overview

In this lab you will be doing virtual genetic crosses of fruit flies (*Drosophila melanogaster*). You will learn how to collect data from F1 and F2 generations and analyze the results from a monohybrid, dihybrid, or sex-linked cross.

Objectives

- Use chi-square to analyze data
- Understand the life cycle of fruit flies
- Investigate the independent assortment of two genes and determine whether the two genes are autosomal or sex-linked using a multi-generation experiment

Introduction

The fruit fly is an excellent organism for genetic studies because it has simple food requirements, occupies little space, is hardy, completes its life cycle in about 12 days at room temperature, produces large numbers of offspring, can be immobilized easily for examination, and has many types of hereditary variations that can be observed with low-power magnification. Fruit flies have a small number of chromosomes (four pairs). Much research about the genetics of fruit flies during the last 50 years has resulted in a wealth of reference literature and knowledge about hundreds of its genes.

The *Drosophila* life cycle:

Male vs. female fruit flies:
