[The A.R.R.L. Antenna Book](#), 1954 **The ARRL Antenna Book** American Radio Relay League, 2003 The ultimate reference for amateur radio antennas transmission lines and propagation Extensively revised readers will find the latest antenna theory and a wealth of practical how to construction projects CD ROM included with the complete fully searchable text

[Getting Started in Radio Astronomy](#) Steven Arnold, 2013-09-24 Radio astronomy is a mystery to the majority of amateur astronomers yet it is the best subject to turn to when desirous of an expanded knowledge of the sky This guide intends to instruct complete newcomers to radio astronomy and provides help for the first steps on the road towards the study of this fascinating subject In addition to a history of the science behind the pursuit directions are included for four easy to build projects based around long term NASA and Stanford Solar Center projects The first three projects constitute self contained units available as kits so there is no need to hunt around for parts The fourth more advanced project encourages readers to do their own research and track down items *Getting Started in Radio Astronomy* provides an overall introduction to listening in on the radio spectrum With details of equipment that really works a list of suppliers lists of online help forums and written by someone who has actually built and operated the tools described this book contains everything the newcomer to radio astronomy needs to get going

The Analytical Foundations of Loop Antennas and Nano-Scaled Rings Arnold McKinley, 2019-03-27 This book develops the analytical theory of perfectly conducting and lossy metal circular round wire loop antennas and nano scaled rings from the radio frequency RF regime through infrared and the optical region It does so from an antenna theory perspective It is the first time that all of the historical material found in the literature has appeared in one place It includes particularly material that has appeared in the literature only in the last decade and some new material that has not yet been published The book derives the input impedance resonances and anti resonances the RLC

circuit model representation and radiation patterns not only of closed loops and rings but also of loops and rings loaded randomly and multiply with resistive and reactive impedances Every derivation is compared with simulations run in Microwave Studio MWS It looks carefully at the physical response of loop antennas and nano rings coupled to a source at one point in the periphery and at such rings illuminated by a plane wave arriving from every different direction with the E field in all polarizations The book ends with a brief look at polygonal loops two dimensional arrays of nano rings and Yagi Uda arrays
