

Introduction to PLC Programming

© 2000-2001 Rockwell Automation

Lesson 01: Recommended Development Environment

About PLCs

PLCs were developed to provide a means of controlling manufacturing processes through relays. For more information, see www.rockwellautomation.com.

A PLC is a computerized device that can be programmed to perform a variety of tasks. It can be used to control machinery, including control systems for pumps, motors, and valves. They accept a flow of data in digital and analog formats, storing, analyzing and reacting to this information in a variety of ways. They are used in a wide range of applications, from simple on/off control to complex motion control. They are used in a wide range of applications, from simple on/off control to complex motion control. They are used in a wide range of applications, from simple on/off control to complex motion control.

Modern PLCs are often used in a variety of applications. They can be used for simple on/off control, as well as for more complex applications, such as motion control and process control.
