The Magic of Numbers Benedict H. Gross, Joe Harris, 2004 The Magic of Numbers was written with two goals in mind first to introduce the reader to some of the beauty of numbers the patterns in their behavior that have fascinated mathematicians for millennia and some surprising applications of those patterns second and equally important to teach the reader something of the mathematical mode of thought the feeling of exploration excitement and discovery that are part of how mathematics is developed The book written originally for the course Quantitative Reasoning 28 that the authors developed and taught at Harvard draws the reader into the content through an engaging and informal writing style Example driven it reduces to a minimum the abstract notation and formal argument that often creates a barrier between mathematicians and students focusing more instead on the experimental aspect of the subject Above all the authors communicate to the reader a sense of the joy and fascination of learning mathematics Additional exercises problems and sample exams are available at www.prenhall.com/gross Principal topics include Counting and basic combinatorics with applications to probability and games The arithmetic of natural numbers the Euclidean Algorithm and the unique factorization theorem Modular arithmetic including Fermat's Theorem Euler's Theorem and how to take powers and roots Codes how the special properties of ordinary and modular arithmetic in combination allow us to construct the public key codes that help make data transmission secure *School Reform and Research in Educational Psychology* Ronald W. Marx, 2000 The legendary Greek figure Orpheus was said to have possessed magical powers capable of moving all living and inanimate things through the sound of his lyre and voice Over time the Orphic theme has come to indicate the power of music to unsettle subvert and ultimately bring down oppressive realities in order to liberate the soul and expand human life without limits The liberating effect of music has been a particularly important theme in twentieth century African American literature The nine original essays in *Black Orpheus* examines the Orphic theme in the fiction of such African American writers as Jean Toomer Langston Hughes Claude McKay James Baldwin Nathaniel Mackey Sherley Anne Williams Ann Petry Ntozake Shange Alice Walker Gayl Jones and Toni Morrison The authors discussed in this volume depict music as a mystical shamanistic and spiritual power that can miraculously transform the realities of the soul and of the world Here the musician uses his or her music as a weapon to shield and protect his or her spirituality Written by scholars of English music women's studies American studies cultural theory and black and Africana studies the essays in this interdisciplinary collection ultimately explore the thematic linguistic structural presence of music in twentieth century African American fiction
