Distributed Control of Robotic Networks Francesco Bullo, Jorge Cortés, Sonia Martínez, 2009-07-06 This self contained introduction to the distributed control of robotic networks offers a distinctive blend of computer science and control theory The book presents a broad set of tools for understanding coordination algorithms determining their correctness and assessing their complexity and it analyzes various cooperative strategies for tasks such as consensus rendezvous connectivity maintenance deployment and boundary estimation The unifying theme is a formal model for robotic networks that explicitly incorporates their communication sensing control and processing capabilities a model that in turn leads to a common formal language to describe and analyze coordination algorithms Written for first and second year graduate students in control and robotics the book will also be useful to researchers in control theory robotics distributed algorithms and automata theory The book provides explanations of the basic concepts and main results as well as numerous examples and exercises Self contained exposition of graph theoretic concepts distributed algorithms and complexity measures for processor networks with fixed interconnection topology and for robotic networks with position dependent interconnection topology Detailed treatment of averaging and consensus algorithms interpreted as linear iterations on synchronous networks Introduction of geometric notions such as partitions proximity graphs and multicenter functions Detailed treatment of motion coordination algorithms for deployment rendezvous connectivity maintenance and boundary estimation Tools and Algorithms for the Construction and Analysis of Systems Tomáš Vojnar, Lijun Zhang, 2019-04-03 This book is Open Access under a CC BY licence The LNCS 11427 and 11428 proceedings set constitutes the proceedings of the 25th International Conference on Tools and Algorithms for the Construction and Analysis of Systems TACAS 2019 which took place in Prague Czech Republic in April 2019 held as part of the European Joint Conferences on Theory and Practice of Software ETAPS 2019 The total of 42 full and 8 short tool demo papers presented in these volumes was carefully reviewed and selected from 164 submissions The papers are organized in topical sections as follows Part I SAT and SMT SAT solving and theorem proving verification and analysis model checking tool demo and machine learning Part II concurrent and distributed systems monitoring and runtime verification hybrid and stochastic systems synthesis symbolic verification and safety and fault tolerant systems

Complexity and Geographical Economics Pasquale Commendatore, Saime Kayam, Ingrid Kubin, 2015-02-17 The uneven geographical distribution of economic activities is a huge challenge worldwide and also for the European Union In Krugman s New Economic Geography economic systems have a simple spatial structure This book shows that more sophisticated models should visualise the EU as an evolving trade network with a specific topology and different aggregation levels At the highest level economic geography models give a bird eye s view of spatial dynamics At a medium level institutions shape the economy and the structure of financial and labour markets At the lowest level individual decisions interact with the economic social and institutional environment the focus is on firms decision on location and innovation Such

multilevel models exhibit complex dynamic patterns path dependence cumulative causation hysteresis on a network structure and specific analytic tools are necessary for studying strategic interaction heterogeneity and nonlinearities
