Synaptic Plasticity for Neuromorphic Systems Christian Mayr, Sadique Sheik, Chiara Bartolozzi, Elisabetta Chicca, 2016-06-26 One of the most striking properties of biological systems is their ability to learn and adapt to ever changing environmental conditions tasks and stimuli It emerges from a number of different forms of plasticity that change the properties of the computing substrate mainly acting on the modification of the strength of synaptic connections that gate the flow of information across neurons Plasticity is an essential ingredient for building artificial autonomous cognitive agents that can learn to reliably and meaningfully interact with the real world For this reason the neuromorphic community at large has put substantial effort in the design of different forms of plasticity and in putting them to practical use These plasticity forms comprise among others Short Term Depression and Facilitation Homeostasis Spike Frequency Adaptation and diverse forms of Hebbian learning e.g Spike Timing Dependent Plasticity This special research topic collects the most advanced developments in the design of the diverse forms of plasticity from the single circuit to the system level as well as their exploitation in the implementation of cognitive systems

Enterprise Digital Transformation Peter Augustine, Pethuru Raj, Sathyan Munirathinam, 2022-02-17 Digital transformation DT has become a buzzword Every industry segment across the globe is consciously jumping toward digital innovation and disruption to get ahead of their competitors In other words every aspect of running a business is being digitally empowered to reap all the benefits of the digital paradigm All kinds of digitally enabled businesses across the globe are intrinsically capable of achieving bigger and better things for their constituents Their consumers clients and customers will realize immense benefits with real digital transformation initiatives and implementations The much awaited business transformation can be easily and elegantly accomplished with a workable and winnable digital transformation strategy plan and execution There are several enablers and accelerators for realizing the much discussed digital transformation There are a lot of digitization and digitalization technologies available to streamline and speed up the process of the required transformation Industrial Internet of Things IIoT technologies in close association with decisive advancements in the artificial intelligence AI space can bring forth the desired transitions The other prominent and dominant technologies toward forming digital organizations include cloud IT edge fog computing real time data analytics platforms blockchain technology digital twin

paradigm virtual and augmented reality VR AR techniques enterprise mobility and 5G communication These technological innovations are intrinsically competent and versatile enough to fulfill the varying requirements for establishing and sustaining digital enterprises Enterprise Digital Transformation Technology Tools and Use Cases features chapters on the evolving aspects of digital transformation and intelligence It covers the unique competencies of digitally transformed enterprises IIoT use cases and applications It explains promising technological solutions widely associated with digital innovation and disruption The book focuses on setting up and sustaining smart factories that are fulfilling the Industry 4.0 vision that is realized through the IIoT and allied technologies

Closed-Loop Systems for Next-Generation Neuroprostheses Timothée Levi, Paolo Bonifazi, Paolo Massobrio, Michela Chiappalone, 2018-04-26 Millions of people worldwide are affected by neurological disorders which disrupt the connections within the brain and between brain and body causing impairments of primary functions and paralysis Such a number is likely to increase in the next years and current assistive technology is yet limited A possible response to such disabilities offered by the neuroscience community is given by Brain Machine Interfaces BMIs and neuroprostheses The latter field of research is highly multidisciplinary since it involves very different and disperse scientific communities making it fundamental to create connections and to join research efforts Indeed the design and development of neuroprosthetic devices span involve different research topics such as interfacing of neural systems at different levels of architectural complexity from in vitro neuronal ensembles to human brain bio artificial interfaces for stimulation e.g. micro stimulation DBS Deep Brain Stimulation and recording e.g. EMG Electromyography EEG Electroencephalography LFP Local Field Potential innovative signal processing tools for coding and decoding of neural activity biomimetic artificial Spiking Neural Networks SNN and neural network modeling In order to develop functional communication with the nervous system and to create a new generation of neuroprostheses the study of closed loop systems is mandatory It has been widely recognized that closed loop neuroprosthetic systems achieve more favorable outcomes for users than equivalent open loop devices Improvements in task performance usability and embodiment have all been reported in systems utilizing some form of feedback The bi-directional communication between living neurons and artificial devices is the main final goal of those studies However closed loop systems are still uncommon in the literature mostly due to requirement of multidisciplinary effort Therefore through eBook on closed loop systems for next generation neuroprostheses we encourage an active discussion among neurobiologists electrophysiologists bioengineers computational neuroscientists and neuromorphic engineers This eBook aims to facilitate this process by ordering the 25 contributions of this research in which we highlighted in three different parts A Optimization of different blocks composing the closed loop system B Systems for neuromodulation based on DBS EMG and SNN and C Closed loop BMIs for rehabilitation
