Edited by the founder and coordinator of the International Corpus of Learner English (ICLE), the book contains articles on all aspects of corpus compilation, design, and analysis. The book is divided into three main sections. In Part I, the first chapter provides the reader with an overview of the field, explaining links with corpus and applied linguistics, second language acquisition, and ELT. The second chapter reviews the software tools which are currently available for analysing learner language and contains useful examples of how they can be used. Part 2 contains eight case studies in which computer learner corpora are analysed for various lexical, discourse, and grammatical features. The articles contain a wide range of methodologies with broad general application. The chapters in Part 3 look at how Computer Learner Corpus (CLC) based studies can help improve pedagogical tools, EFL grammars, dictionaries, writing textbooks, and electronic tools. Implications for classroom methodology are also discussed. The comprehensive scope of this volume should be invaluable to applied linguists and corpus linguists, as well as to would-be learner corpus builders and analysts who wish to discover more about a new, exciting, and fast-growing field of research.
