

Chapter Two: Population

Key Issue 1: Where is the world's Population Distributed?

Demography- the scientific study of population characteristics.

Overpopulation- the status of not just the total number of people on Earth, but also the relationship between the number of people and the availability of resources.

Nearly two-thirds of the world's population live in 4 main regions:

- East Asia—One-fifth of world pop—Five-sixths live in China alone
- South Asia—One-fifth of world pop—Three-fourths live in India
- Southeast Asia—approx. one-twelfth of world pop
- Europe—One-ninth of world pop

All of the above mentioned population clusters are located w/in 500 miles of ocean coasts

Ecumene- portion of Earth's surface permanently occupied by humans.

Approximately three-fourths of world population lives on less than 5% of Earth's surface.

Generally inhospitable lands are:

- Dry Lands too dry for farming cover 20% of land surface.
- Wet Lands too wet for habitation are generally near the equator.
- Cold Lands too frigid to support civilization.
- High Lands too steep, cold, snow-covered for habitation.

Arithmetic density- total number of people divided by total land area.

Physiological density- total number of people divided by total arable land area.

Agricultural density- total number of farmers divided by total arable land area.

Key Issue 2: Where has the world's population increased?

Crude birth rate- (CBR) total number of live births per every 1000 people per year.

Crude death rate- (CDR) total number of deaths per every 1000 people per year.

Natural increase rate- (NIR) % by which a population grows in a year (excluding migration).

Doubling time- the number of years needed to double a population (assuming constant NIR)

Total Fertility Rate- (TFR) the average number of births a woman will have in her lifetime.

Infant Mortality Rate- (IMR) the annual number of deaths of infants under 1 year old compared to number of live births.

Life expectancy- the average number of years a newborn can expect to live at current mortality levels.

Agricultural revolution- domestication of animals.

Industrial revolution- a conjunction of major improvements in technology that transformed the process of manufactured goods.

Medical revolution- the diffusion of med tech from MDCs to the LDCs.

Zero population growth- (ZPG) occurs when $TFR = 2.1$. (again excluding immigration) 5

- The NIR was 1.3 % during the first decade of the 21st century, hit it's all-time high of 2.2 % in 1963, slowly fell throughout the latter part of the century, and has declined sharply during the past decade. Although the NIR is lower now than in the 1960's, the number of

Geographical Knowledge Construction and Production Archie K. Deen, 2015-09-02 Geographical Knowledge Construction and Production Teacher and Student Perspectives is a readable and illuminating account of three high school classrooms in suburban Atlanta Georgia It challenges the narrow focus of the Advanced Placement AP programme as a tool for admission into colleges and universities in the United States The research provides insight into the College Board s AP programme and argues for teaching and learning that is transformative and geared toward equipping students with the skills and knowledge necessary to confront the challenges of the 21st century In particular it advocates for geographic education that is anchored in the structure of the subject teasing wherever possible the contradictions and tensions embedded in the complexities of facts relating to people and places This book is essential reading for professors and students of education teachers and students of AP courses parents administrators and state and federal agencies vested in the AP programme **5**
