The Long Millennium Mark Jarzombek,2023-12-01 This book argues that long distance trade in luxury items such as diamonds gold cinnamon scented woods ivory and pearls all of which require little overhead in their acquisition and were relatively easy to transport played a foundational role in the creation of what we would call global trade in the first millennium CE The book coins the term dark matter economy to better describe this complex though mostly invisible relationship to normative realities The first full integration of dark matter economy with the emerging global flows took place in South India and Sri Lanka at the beginning of the millennium The book then moves to other places in the world sweet spots where a particular type of affluence was generated through the trade in luxury goods This upstream affluence manifested itself in the creation of shrines palaces temples and engineering works that all thickened the landscape of memory control and extraction and also served as a defense mechanism against intrusions from afar The book also explains the collapse of dark matter economy as a result of the cumulative energies of colonialism modernization and nationalism that make it hard for us today to come to terms with this history The Long Millennium will appeal to students and scholars alike studying the trade networks and economics of the early Middle Ages as well as anyone interested in the effect of trade on medieval society in the first millennium CE

Third World Cities In Global Perspective David Alden Smith,1996-02-08 In this innovative book David Smith ultimately links what happens on the ground in the neighborhoods where people live to the larger political and economic forces at work putting these connections in a historical framework and using a case study approach The societies of the world s underdeveloped countries are now undergoing an urban revolution that is drastically altering the fabric of their predominantly rural agrarian societies Smith takes the emerging political economy perspective on urbanization with its focus on global inequality and dependency as the context for city growth in the Third World This perspective allows Smith to critique the conventional ecological view of the city not by rejecting traditional analyses out of hand but by reformulating the crucial questions The conventional ecological perspective assumes an equilibrium model

where very rapid city growth and the various types of urban imbalances are transitional phases on the path to modernity in contrast the comparative political economy approach conceptualizes uneven development and inequality as an inevitable result of the expansion of the capitalist world system **World Architecture** ,1999 *The Heritage of World Civilizations* Albert M.
