

# Pharmacology ATI Study Guide

## Chapter 1: Pharmacokinetics and Routes of Administration

- Absorption
  - Route of admin affects the rate and amount of absorption
  - Oral:
    - GI pH and emptying time
    - Presence of food in the stomach or intestines
    - Form of meds (liquid/XR)
  - Sublingual/buccal
    - Quick absorption systemically through highly vascular mucous membranes
  - Inhalation via mouth/nose
    - Rapid absorption through alveolar capillary networks
  - Intradermal, topical
    - Slow, gradual absorption
  - SQ/IM
    - Highly soluble meds have rapid absorption (10-30min), poorly soluble have slower absorption
    - Blood perfusion at site of injection affect absorption
  - IV
    - Immediate and complete
- Distribution
  - Transportation of meds to sites of action by body fluids
  - Plasma binding protein: meds compete for protein binding sites within bloodstream, primarily albumin. The ability of med to bind to protein can affect how much med will leave and travel to target tissues.
- Metabolism
  - Primarily occurs in the liver but can take place in the kidney
  - Factors that influence metabolism:
    - Age (infants/older adults require smaller doses)
    - First pass effect: liver inactivates some meds on first pass through and thus require sublingual or IV route (may need higher dose)
- Excretion:
  - Eliminated through the kidneys.
  - Kidney dysfunction can result in elevated levels of medications.
- Med Response
  - Maintain plasma levels between minimum effective concentration and the toxic concentration:
- Therapeutic index (TI)
  - High TI has a wide safety margin.
  - Low TI requires monitoring of serum levels.
  - Tough levels: obtain immediately before next dose.
