Feature Based Product Life-Cycle Modelling René Soenen, Gustav J. Olling, 2013-04-17 Feature based technology is the key factor towards meeting the increasingly high demands of improving and speeding up the product development process from concept to customer feedback and is therefore expected to be able to provide for a better approach to integrate the complete product design process chain Feature Based Product Life Cycle Modelling is dedicated to exploring the progress towards an integrated solution for the product creation process based on feature technology Hence it encompasses significant phases of the product creation process from conceptual design to recycling including the following topics Life phases modelling Knowledge based engineering Multiple view geometric modelling Technological links among assemblies Manufacturing

process cost estimation Manufacturing modelling Machining preparation Product deterioration prediction Product recovery estimation For each topic a state of the art theoretic bases tentative solutions and illustrative examples are detailed demonstrating the successful application of feature technology to the modelling of innovative products and the efficient control of their design The book is a selection of proceedings from the International Conference on Feature Modelling in Advanced Design for the Life Cycle Systems FEATS 2001 which was sponsored by the International Federation for Information Processing IFIP and held in Valenciennes France in June 2001

Product Design for the Environment Fabio Giudice, Guido La Rosa, Antonino Risitano, 2006-01-13 In recent years the increased awareness of environmental issues has led to the development of new approaches to product design known as Design for Environment and Life Cycle Design Although still considered emerging and in some cases radical their principles will become by necessity the wave of the future in design A thorough exploration of the subject Product Design for the Environment A Life Cycle Approach presents key concepts basic design frameworks and techniques and practical applications It identifies effective methods and tools for product design stressing the environmental performance of products over their whole life cycle After introducing the concepts of Sustainable Development the authors discuss Industrial Ecology and Design for Environment as defined in the literature They present the life cycle theory and approach explore how to apply it and define its main techniques The book then covers the main premises of product design and development delineating how to effectively integrate environmental aspects in modern product design The authors pay particular attention to environmental strategies that can aid the achievement of the requisites of eco efficiency in various phases of the product life cycle They go on to explore how these strategies are closely related to the functional performance of the product and its components and therefore to some aspects of conventional engineering design The book also introduces phenomena of performance deterioration together with principles of design for component durability and methods for the assessment of residual life Finally the book defines entirely new methods and tools in relation to strategic issues of Life Cycle Design Each theme provides an introduction to the problems and original proposals based on the authors experience
