This book provides an in-depth coverage of all official exam objectives. This book is organized in two parts: Part One covers LX0 103 101 400 exam objectives and Part Two covers LX0 104 102 400 exam objectives. The book includes hands-on examples, step-by-step exercises, chapter-end review of concepts, files, and commands learned, and 790 challenging practice questions. This book uses the learn-by-doing methodology. It begins with guidance on how to download a virtualization software and two Linux distribution versions and then provides instructions on how to create VMs and install Linux in them to set up a lab environment for hands-on learning. Throughout the book, appropriate command prompts are employed to identify the lab system and user to run a command. Each command and task presented in the book was actually performed and tested on lab systems. Followed by the lab environment setup in Part One, the book presents the essentials of Linux, including interaction with Linux basic commands, file management, permissions, ownership, linking, searching, special permissions, editing, filter programs, regex, shell features, and process handling. Subsequent topics focus on system administration, including shared libraries, Debian and RPM package management system, boot and initialization, hardware management, kernel modules, storage partitioning, file system creation and repairs, quota handling, and swap space administration. This brings Part One to an end, and you should be able to take the quiz in Appendix A to test your readiness for the LX0 103 101 400 exam. Part Two covers all the objectives for the LX0 104 102 400 exam. It covers shell scripts with a presentation and line-by-line analysis of several scripts. Building a simple SQL database and performing queries comes next. A detailed comprehension of local authentication files, user creation, password aging, and shell startup files follows. The book covers networking concepts, reference models, and terms that accompany exercises on interface configuration, hostname change, and route management. A discussion of network testing and debugging tools is furnished, and their usage is demonstrated, followed by topics on internationalization, localization, time synchronization, name resolution, X Window display, desktop managers, accessibility options, printer and print queue administration, task scheduling, system logging, system and service access controls, emailing, and email aliasing, searching for special files, and so on. This brings Part Two to an end, and you should be able to take the quiz in Appendix C to test your readiness for the LX0 104 102 400 exam. Highlights: 100% coverage of ALL official exam objectives, version 4.0 Enumerated and descriptive knowledge areas under exam objectives to assist in identifying and locating them.
