Clinical Image-Based Procedures. Translational Research in Medical Imaging Marius George Linguraru, Cristina Oyarzun Laura, Raj Shekhar, Stefan Wesarg, Miguel Ángel González Ballester, Klaus Drechsler, Yoshinobu Sato, Marius Erdt, 2014-12-08 This book constitutes revised selected papers from the Third International Workshop on Clinical Image Based Procedures CLIP 2014 held in conjunction with MICCAI 2014 in Boston MA USA in September 2014 The 19 papers presented in this volume were carefully reviewed and selected from 26 submissions New strategies are essential to ensure a smooth and effective translation of computational image based techniques into the clinic For these reasons CLIP 2014 s major focus is on translational research filling the gaps between basic science and clinical applications A highlight of the workshop is the subject of strategies for personalized medicine to enhance diagnosis treatment and interventions Authors are encouraged to submit work centered on specific clinical applications including techniques and procedures based on comprehensive clinical image data Submissions related to applications already in use and evaluated by clinical users are particularly encouraged The event will bring together world class specialists to present ways to strengthen links between computer scientists and engineers and clinicians

Automation and Artificial Intelligence in Radiation Oncology Savino Cilla, Jose Eduardo Villarreal Barajas, 2022-11-16

Multidisciplinary Management of Rectal Cancer Vincenzo Valentini, Hans-Joachim Schmoll, Cornelis J. H. van de Velde, 2012-07-18 This book seeks to promote an integrated approach among the various specialists involved in the management of rectal cancer with a view to ensuring that treatment is tailored appropriately to the individual patient For ease of use a question and answer format is employed The focus is on those issues typically confronted during daily clinical practice in relation to risk factors imaging surgery radiotherapy and chemotherapy The services of an outstanding panel of authors representative of the major European oncological societies have been acquired in order to formulate the questions and provide the answers All who need assistance in addressing concerns that arise from the need for multidisciplinary management of rectal cancer will find the book to be an ideal source of helpful information

Auto-Segmentation for Radiation Oncology Jinzhong Yang, Gregory C. Sharp, Mark J. Gooding, 2021-04-18 This book provides a comprehensive introduction to current state of the art auto segmentation approaches used in radiation oncology for auto delineation of organs at risk for thoracic radiation treatment planning Containing the latest cutting edge technologies and treatments it explores deep learning methods multi atlas based methods and model based methods that are currently being developed for clinical radiation oncology applications Each chapter focuses on a specific aspect of algorithm choices and discusses the impact of the different algorithm modules to the algorithm performance as well as the implementation issues for clinical use including data curation challenges and auto contour evaluations This book is an ideal guide for radiation oncology centers looking to learn more about potential auto segmentation tools for their clinic in addition to medical physicists commissioning

auto segmentation for clinical use Features Up to date with the latest technologies in the field Edited by leading authorities in the area with chapter contributions from subject area specialists All approaches presented in this book are validated using a standard benchmark dataset established by the Thoracic Auto segmentation Challenge held as an event of the 2017 Annual Meeting of American Association of Physicists in Medicine

Data-Based Radiation Oncology - Design of Clinical Trials Kerstin A. Kessel,Anne W. Lee,Søren M. Bentzen,Bhadransain Vikram,Fridtjof Nuesslin,Stephanie E. Combs,2018-04-12 In radiation oncology as in many other specialties clinical trials are essential to investigate new therapy approaches Usually preparation for a prospective clinical trial is extremely time consuming until ethics approval is obtained To test a new treatment usually many years pass before it can be implemented in the routine care During that time already new interventions emerge new drugs appear on the market technical physical innovations are being implemented novel biology driven concepts are translated into clinical approaches while we are still investigating the ones from years ago Another problem is associated with molecular diagnostics and the growing amount of tumor specific biomarkers which allows for a better stratification of patient subgroups On the other side this may result in a much longer time for patient recruiting and consequently in larger multicenter trials Moreover all of the relevant data must be readily available for treatment decision making treatment as well as follow up and ultimately for trial evaluation This challenges even more for agreed standards in data acquisition quality and management How could we change the way currently clinical trials are performed in a way they are safe and ethically justifiable and speed up the initiation process so we can provide new and better treatments faster for our patients Further while we rely on various quantitative information handling distributed large heterogeneous amounts of data efficiently is very important Thus data management becomes a strong focus A good infrastructure helps to plan tailor and conduct clinical trials in a way they are easy and quickly analyzable In this research topic we want to discuss new ideas for intelligent trial designs and concepts for data management
