Ludwig's Applied Process Design for Chemical and Petrochemical Plants A. Kayode Coker, 2011-08-30 This complete revision of Applied Process Design for Chemical and Petrochemical Plants Volume 1 builds upon Ernest E Ludwig's classic text to further enhance its use as a chemical engineering process design manual of methods and proven fundamentals. This new edition includes important supplemental mechanical and related data nomographs and charts. Also included within are improved techniques and fundamental methodologies to guide the engineer in designing process equipment and applying chemical processes to properly detailed equipment. All three volumes of Applied Process Design for Chemical and Petrochemical Plants serve the practicing engineer by providing organized design procedures, details on the equipment suitable for application, selection and charts in readily usable form. Process engineers, designers and operators will find more chemical/petrochemical plant design data in Volume 2 Third Edition which covers distillation and packed towers as well as material on azeotropes and ideal/non-ideal systems. Volume 3 Third Edition which covers heat transfer, refrigeration systems, compression, surge drums and mechanical drivers. A. Kayode Coker is Chairman of Chemical Process Engineering Technology department at Jubail Industrial College in Saudi Arabia. He is both a chartered scientist and a chartered chemical engineer for more than 15 years and an author of Fortran Programs for Chemical Process Design Analysis and Simulation, Gulf Publishing Co and Modeling of Chemical Kinetics and Reactor Design, Butterworth-Heinemann. Provides improved design manuals for methods and proven fundamentals of process design with related data and charts. Covers a complete range of basic day-to-day petrochemical operation topics with new material on significant industry changes since 1995. *Ludwig's Applied Process Design for Chemical and Petrochemical Plants Incorporating Process Safety Incidents* A. Kayode Coker, 2024-07-10 Ludwig's Applied Process Design for Chemical and Petrochemical Plants Incorporating Process Safety Incidents is ever evolving, starting with the first edition some 60 years ago. The volumes in this fifth edition provide improved techniques and fundamental design methodologies to guide the practicing engineer in designing process equipment and applying chemical processes to the properly detailed hardware. As indicative of the new title, process safety incidents are incorporated in many of the chapters, reviewing the root causes and how these could be mitigated in the future. Like its predecessor, this new edition continues to present updated information for achieving optimum operational and process conditions and to avoid problems caused by inadequate sizing and lack of internally detailed hardware. The volumes provide both fundamental theories where applicable and direct application of these theories to applied equations essential in the design effort. This approach in presenting design information is essential for troubleshooting process equipment and in executing system performance analysis. Volume 1B continues to cover mixing of liquids, process safety and pressure-relieving devices, metallurgy and corrosion and process optimization. It builds upon Ernest E Ludwig's classic text to further enhance its use as a chemical engineering process design manual of methods and proven fundamentals. This new edition includes new content on three

phase separation mixing of liquids ejectors and mechanical vacuum systems process safety and pressure relieving devices metallurgy and corrosion and optimization of chemical process blending Some chapters review pressure relieving devices and provide case studies for process safety incidents which are well illustrated from US Chemical Safety Hazard Investigation Board www.csb.gov Finally this book contains a glossary of Petroleum and Petrochemical Terminologies and Physical and Chemical Characteristics of Major Hydrocarbons Provides improved design manual for methods and proven fundamentals of process design with related data and charts Covers complete range of basic day to day petrochemical operation topics Extensively revised with new material added on three phase separation metallurgy and corrosion Process safety management HAZOP and hazard analyses and optimization of chemical process blending Presents many examples using Honeywell UniSim Design software developed and executable computer programs and Excel spreadsheet programs Includes case studies of process safety incidents guidance for troubleshooting and checklists Includes Software of Conversion Table and 30 process data sheets in excel format

RELEASE David W. Johnson, John L. Woodward, 2010-09-17 This book documents CCPS's Aerosol Research Program to develop a model to predict liquid rainout from release of a pressurized liquefied gas and hence the residual amount of material in a vapor cloud which may be greater than the amount calculated from an enthalpy chart RELEASE predicts the rate of fluid discharge the depressurization flashing and formation of liquid drops the entrainment of drops into the vapor cloud the subsequent spreading of the jet and rate of liquid rainout to a pool on the ground Designed in a modular fashion to permit adjustment and corrections as new data become available its multi

layered approach contains sub models that include the complexities of many variables including the effect of liquid superheat rate of bubble growth criterion for bubble formation and heat transfer from the liquid to the growing vapor bubble To validate RELEASE CCPS conducted small and large scale experiments using superheated water heated liquefied chlorine methylamine and cyclohexane that produced valuable data in an area where data are scarce This book gives complete access in text and on CD ROM to the model and the test data giving users an informed ability to apply the model to their own work

Reilly,2012-12-06 Industrial food processing involves the production of added value foods on a large scale these foods are made by mixing and processing different ingredients in a prescribed way The food industry historically has not designed its processes in an engineering sense i e by understanding the physical and chemical principles which govern the operation of the plant and then using those principles to develop a process Rather processes have been designed by purchasing equipment from a range of suppliers and then connecting that equipment together to form a complete process When the process being run has essentially been scaled up from the kitchen then this may not matter However there are limits to the approach As the industry becomes more sophisticated and economies of scale are exploited then the size of plant reaches a scale where systematic design techniques are needed The range of processes and products made by the food industry has increased to include foods which have no kitchen counterpart such as low fat spreads It is vital to ensure the quality and safety of the product Plant must be flexible and able to cope with the need to make a variety of products from a range of ingredients This is especially important as markets evolve with time The traditional design process cannot readily handle multi product and multi stream operations Processes must be energetically efficient and meet modern environmental standards Microsoft Visual Basic for Applications (VBA).
