$$q = \sum_{i=1}^n (y_i - a - bx_i)^2 \quad : \text{Sum of squares of errors}$$

Least Squares Methods For System Identification:

System Identification Tien C. Hsia, 1977 *Filtering and System Identification* Michel Verhaegen, Vincent Verdult, 2012-07-19 Filtering and system identification are powerful techniques for building models of complex systems This 2007 book discusses the design of reliable numerical methods to retrieve missing information in models derived using these techniques Emphasis is on the least squares approach as applied to the linear state space model and problems of increasing complexity are analyzed and solved within this framework starting with the Kalman filter and concluding with the estimation of a full model noise statistics and state estimator directly from the data Key background topics including linear matrix algebra and linear system theory are covered followed by different estimation and identification methods in the state space model With end of chapter exercises MATLAB simulations and numerous illustrations this book will appeal to graduate students and researchers in electrical mechanical and aerospace engineering It is also useful for practitioners Additional resources for this title including solutions for instructors are available online at www.cambridge.org/9780521875127

Least Squares Method of System Identification for Multivariable Linear Systems Keith Randall Holstine, 1987

Exact and Approximate Modeling of Linear Systems Ivan Markovskiy, Jan C. Willems, Sabine Van Huffel, Bart De Moor, 2006-01-01 This title elegantly introduces the behavioral approach to mathematical modeling an approach that requires models to be viewed as sets of possible outcomes rather than to be a priori bound to particular representations The authors discuss exact and approximate fitting of data by linear bilinear and quadratic static models and linear dynamic models a formulation that enables readers to select the most suitable representation for a particular purpose This book presents exact subspace type and approximate optimization based identification methods as well as representation free problem formulations an overview of solution approaches and software implementation Readers will find an exposition of a wide variety of modeling problems starting from observed data The presented theory leads to algorithms that are implemented in C language and in MATLAB

Subspace Methods for System Identification Tohru Katayama, 2005-10-11 An in depth introduction to subspace methods for system identification in discrete time linear systems thoroughly augmented with advanced and novel results this text is structured into three parts Part I deals with the mathematical preliminaries numerical linear algebra system theory stochastic processes and Kalman filtering Part II explains realization theory as applied to subspace identification Stochastic realization results based on spectral factorization and Riccati equations and on canonical correlation analysis for stationary processes are included Part III demonstrates the closed loop application of subspace identification methods Subspace Methods for System Identification is an excellent reference for researchers and a useful text for tutors and graduate students involved in control and signal processing courses It can be used for self study and will be of interest to applied scientists or engineers wishing to use advanced methods in modeling and identification of complex systems
