## P *olitical*

- The government makes policies and regulations that businesses should comply with to survive in the market.
- Political stability in a country is one of the key factors that favor the growth of an industry.

## E *conomic*

- The nation's economy immensely affects the business of the retail industry. Economic rise, inflation, recession, and unemployment are some factors that can toll the buying capacity of people.

## S *ocial*

- The countries with a higher per capita income have more customers buying branded items instead of looking for the prices. While the areas with people of middle and low income groups.

## T *echnologica*

- The retail brands use technologically advanced software and hardware to offer customers a user-friendly shopping spree. Besides that, the brands provide data security and a safe payment gateway.

## E *nvironmental*

- The retail brands selling food and items with a limited shelf-life must manufacture or stock the items considering their expiry date. They should arrange the products according to their batch number and expiry date to prevent wastage. Many big retailers like Walmart are seeking to use blockchain technology.

## L *egal*

*An Electric Vehicle Conversion Start-Up. Development of a Business Model Approach* Fabian Hoeft, 2019-10-24 Master s Thesis from the year 2019 in the subject Business economics Business Management Corporate Governance grade 1 3 Niederrhein University of Applied Sciences Krefeld School of Business and Economics language English abstract Today s world of mobility is characterised by a high degree of dynamism and change is becoming apparent Currently around 45 million passenger cars with conventional combustion engines powered by diesel or petrol are registered in Germany The share of electric vehicles is still well below one per cent Nevertheless the voices for sustainable and environmentally friendly transport are becoming louder One political measure in this respect is the implementation of driving bans in major German cities for some conventional combustion cars Car electrification is a solution for converting cars with conventional combustion engines to electric drives In the context of this thesis car electrification is regarded as a transition solution towards a nationwide electrified transport network of new electric cars A comprehensive concept of a business model approach from a start up perspective has been developed based on the analysis of the environment industry and customer needs Analysing the structure of the electrical conversion industry revealed that the subject of car electrification is hardly widespread and that current suppliers have only converted a smaller number of cars Besides the small scale of implementation the operational execution by existing suppliers can be considered weak in terms of competitiveness and sustainability The analysis of the needs of potential customers of car electrification using qualitative and quantitative methods has led to incredibly valuable insights for the development of the business model approach A high openness to

purchase was expressed considering some of the factors mentioned such as a test drive with an electrified car before purchase and a durability guarantee of the conversion The high relevance of initial acquisition costs compared to operating expenses in the purchase decision for passenger cars is another precious insight The business model approach developed based on the findings obtained differs fundamentally from the strategies of today's providers By incorporating the existing infrastructure of workshops and service points proximity to the end customer and scalability of the business operation can be achieved Partnering with universities and industry are two critical elements in the development of a sustainable secure and user friendly technical solution
