*Laser Beam Mode Selection by Computer Generated Holograms* Victor A. Soifer, Mikhail A. Golub, 1994-07-20 *Laser Beam Mode Selection by Computer Generated Holograms* brings attention to a new class of optical elements called modans with applications in laser and fiber optics Separation of the transverse modes by modans is discussed in close analogy to well known effects of color separation by diffraction gratings The book describes the basic questions of digital holography in the recording of complex wavefronts on phase only media binary coding cells multilevel computer generated holograms quantization and sampling image reconstruction and computer generation of multifocal and multibeam holograms This collective effort summarizes 12 years of scientific activities in the development of diffractive optical elements and provides considerable material never before published An interesting appendix dedicates itself to mathematical proof of optimal properties of orthogonal base functions and eigenfunctions *Optical Fiber Telecommunications Volume VIB* Ivan Kaminow, Tingye Li, Alan E. Willner, 2013-05-11 *Optical Fiber Telecommunications VI A B* is the sixth in a series that has chronicled the progress in the R D of lightwave communications since the early 1970s Written by active authorities from academia and industry this edition brings a fresh look to many essential topics including devices subsystems systems and networks A central theme is the enabling of high bandwidth communications in a cost effective manner for the development of customer applications These volumes are an ideal reference for R D engineers and managers optical systems implementers university researchers and students network operators and investors Volume A is devoted to components and subsystems including photonic integrated circuits multicore and few mode fibers photonic crystals silicon photonics signal processing and optical interconnections Volume B is devoted to systems and networks including advanced modulation formats coherent detection Tb s channels space division multiplexing reconfigurable networks broadband access undersea cable satellite communications and microwave photonics All the latest technologies and techniques for developing future components and systems Edited by two winners of the highly prestigious OSA IEEE John Tyndal award and a President of IEEE s Lasers Electro Optics Society 7 000 members Written by leading experts in the field it is the most authoritative and comprehensive reference on optical engineering on the market *Optical Engineering* , 1996-04 Publishes papers reporting on research and development in optical science and engineering and the practical applications of known optical science engineering and technology *The Cumulative Book Index* , 1996 A world list of books in the English language *American Book Publishing Record* , 1995 **Photonics Elements for Sensing and Optical Conversions** Nikolay L. **Journal of the Optical Society of America** ,2005 **Energy Research Abstracts** ,1989 **Selected Papers on Computer-generated Holograms and Diffractive Optics** Sing H. Lee,1992 An important feature of computer generated holograms CGHs is to create wavefronts that may be defined only mathematically Since A W Lohmann and his colleagues invented CGHs in 1966 for spatial filtering in image processing the applications of CGHs have multiplied to include 3 D display optical testing diffractive binary optics bifocal intraocular lenses wavefront transformations for material processing pickup heads for optical disks focal plane array detection coherent laser addition beam steering and optical interconnects for parallel computing and neural computing Today the applications of CGHs continue to expand This book features a selection of papers that examine different aspects of the development of CGHs from the 1960s through 1990 because there is no substitute for reading the original papers on any subject even if that subject is mature enough to have many single aspect monographs and textbooks It is hoped that this selection of papers will be valuable additions to many working libraries on this expanding expansive subject **Subject Guide to Books in Print** ,1997 *Books in Print* ,1991 **Journal of the Optical Society of America** Optical Society of America,1981 *Contemporary Holography* C. Narayanamurthy,2022-12-16 This book is unique in covering most of the developments on optical holographic techniques since holography s invention in 1947 by Dennis Gabor Starting from conventional holography with photopolymer recording techniques to CCD Charge Coupled Device based digital holography this book covers the spectrum of contemporary holographic techniques The first chapter deals with conventional holographic methods using photographic plates in both in line Gabor holography and off axis holography Then the second chapter covers principle and experimental techniques of the Conoscopic holography technique and the third chapter deals with Computer generated holography The fourth chapter discusses basic principles of dynamic holography using photorefractive crystals where the theory and experiments show how

the photorefractive effect is used for dynamic recording of holograms The fifth and sixth chapters extensively discuss the fundamentals of digital holography and unconventional coherence holography In digital holography two types of phase shifting methods which are dynamic and geometric phase shifting digital holographic techniques are elaborated with practical examples Then in the sixth chapter the unconventional coherence holographic method describes a new holography using incoherent light sources This book is intended for advanced undergraduate and first year graduate level students as well as researchers looking for a complete resource in holography techniques
