Energy and environment policies and strategies are scientifically discussed to expose the best ways to reduce global warming effects and protect the environment and energy sources affected by human activities. The importance of green energy consumption on the reduction of global warming, energy saving and energy security are also discussed. This book also focuses on energy management and conservation strategies for better utilization of energy sources and technologies in buildings and industry as well as ways of improving energy efficiency at the end use and introduces basic methods for designing and sizing cost effective systems and determining whether it is economically efficient to invest in specific energy efficiency or renewable energy projects and describes energy audit procedures commonly used to improve the energy efficiency of residential and commercial buildings as well as industrial facilities. These features and more provide the tools necessary to reduce global warming and to improve energy management leading to higher energy efficiencies. In order to reduce the negative effects of global warming due to excessive use of fossil fuel technologies, the following alternative technologies are introduced from the engineering perspective: fuel cells, solar power generation technologies, energy recovery technologies, hydrogen energy technologies, wind energy technologies, geothermal energy technologies, and biomass energy technologies. These technologies are presented in detail and modeling studies including case studies can also be found in this book.

Systems Engineering Adedeji B. Badiru, 2023-09-06. People want to create a better world and planet, however, where and how to start remains the question. Systems Engineering's problem solving methodology can help with its ability to answer multiple questions along with connecting actions and impacts. This book uses the Systems Engineering problem solving methodology to frame how each answer impacts the planet when multiple actions are strung together, no matter where they take place. Systems Engineering: Influencing Our Planet and Reengineering Our Actions illustrates a hierarchical Systems Engineering view of the world with each individual in mind as a link in the chain. It uses an Industrial Engineering framework for action implementations and identifies humans' interconnected actions. The book discusses the implementation of the Systems Engineering problem solving methodology and leverages existing concepts of environmental sustainability. A template is present for personal actions for environmental social responsibility using a Systems Engineering problem solving approach and focuses on the foundational use of the trademarked DEJI Systems Model for action design, evaluation, justification, and integration. This book is a perfect read for all academic disciplines and all engineering fields as well as business and management fields. It reminds us of the Environmental Foundation of NAE's 14 Grand Challenges and the part we can play.
