Michelle Perro, Vincanne Adams, 2017-11-22 Exploring the links between GM foods glyphosate and gut health With chronic disorders among American children reaching epidemic levels hundreds of thousands of parents are desperately

seeking solutions to their children's declining health often with little medical guidance from the experts. What's Making Our Children Sick convincingly explains how agrochemical industrial production and genetic modification of foods is a culprit in this epidemic. Is it the only culprit? No. Most chronic health disorders have multiple causes and require careful disentanglement and complex treatments. But what if toxicants in our foods are a major culprit, one that if corrected could lead to tangible results and increased health? Using patient accounts of their clinical experiences and new medical insights about pathogenesis of chronic pediatric disorders, taking us into gut dysfunction and the microbiome as well as the politics of food science, this book connects the dots to explain our kids' ailing health. What's Making Our Children Sick explores the frightening links between our efforts to create higher yield, cost-efficient foods and an explosion of childhood morbidity, but it also offers hope and a path to effecting change. The predicament we now face is simple: Agroindustrial innovation in a previous era hoped to prevent the ecosystem disaster of DDT predicted in Rachel Carson's seminal book in 1962, *Silent Spring*. However, this industrial agriculture movement has created a worse disaster: a toxic environment and consequently a toxic food supply. Pesticide use is at an all-time high despite the fact that biotechnologies aimed to reduce the need for them in the first place. Today, these chemicals find their way into our livestock and food crop industries and ultimately onto our plates. Many of these pesticides are the modern-day equivalent of DDT. However, scant research exists on the chemical soup of poisons that our children consume on a daily basis. As our food supply environment reels under the pressures of industrialization via agrochemicals, our kids have become the walking evidence of this failed experiment. What's Making Our Children Sick exposes our current predicament and offers insight on the medical responses that are available both to heal our kids and to reverse the compromised health of our food supply. Perro and Adams' book is an alarming, eye-opening read that documents more clearly than ever the devastating consequences that pervasive pesticide use in food production is having on our health and the urgent need to protect our children from a system that prefers we treat illness and disease with pills rather than prevention.

This is Volume II of the Research Topic *Interactions between Bioactive Food Ingredients and Intestinal Microbiota*. The previous edition can be found here: [Numerous microorganisms colonize the gastrointestinal tract, playing critical roles concerning digestion and absorption of dietary nutrients and the regulation of important functions including host metabolism, immunity, and intestinal barrier function. Increasing evidence suggests that food encompassing nutrients and polyphenols are strong drivers shaping the composition and function of the gut microbiota and mediate the host's physiological activities directly or indirectly. However, the mechanisms involved in the interactions between food nutrients, prebiotics, gut microbiota, and host health have not been enlightened to a wide extent.](#)
