Airbus A320 Engineer Training Notes:

Aviation and Its Management Arif Sikander, 2019-05-22 Aviation has grown leaps and bounds within the last decade. Aviation courses and training at all levels have shown an exponential increase around the globe. There has been a restricted focus on writing books in this sector of the economy mainly due to the shortage of expertise in this specialist and complex area. This book was written with the purpose of meeting this need of the aviation sector. Due to the diversified nature of aviation knowledge which includes flying, engineering, airports, allied trades for aircraft and airports, airline and airport management and operations education etc, one text alone will not suffice and do justice to address all these areas. It is envisaged to develop subsequent parts of this book to cover all these knowledge areas. This book is the first installment of any subsequent books and explores issues including airline management and operations, airline business models, airport systems, flight operational procedures, aircraft maintenance, runway safety management systems and air traffic management. In particular, attention will be given to aspects such as analysis of air traffic in a domestic market, runway safety management systems, critical success factors for multiple MRO service providers, key pain points of the industry to be addressed to move into the future, new research on hub airports for international flights, new business models for airlines and runway safety management systems. This book is useful to aviation managers, educators, students and professionals interested in any of the above issues.

Handbook of Aviation Neuropsychology Robert Bor, Carina Eriksen, Randy J. Georgemiller, Alastair L. Gray, 2024-11-11 The field of aviation neuropsychology helps us to understand and improve human performance and safety in the aerospace industry both for the estimated 300,000 commercial pilots and the 4.5 billion passengers they transport every year. This handbook brings together a group of internationally renowned academic and industry experts to provide a comprehensive overview of the background, goals, principles, challenges and associated practice skills and research themes of aviation neuropsychology. After an introduction to the history and development of aviation psychology, additional sections focus on the importance of prevention and resilience to enhance airline workers' cognitive and mental functioning to reduce the risk of human errors and accidents, as well as the different aspects of assessment including pilot medical certification, neuropsychological testing and cultural considerations. Additional chapters explore how we can learn from past errors and build on existing strengths. Finally, special aspects are examined including the role of different common conditions e.g. neurological and psychological disorders and report writing in aviation. Readers will find the book full of unique insights, theory and research giving them a comprehensive overview of the field. While the book is designed primarily for health care professionals, neuropsychologists, clinical psychologists, aviation psychologists, aviation medical examiners, neurologists and flight safety specialists, it will be of interest to other professionals inside and outside of aviation including professionals in other safety-critical settings or researchers looking to improve safety in the aviation industry.
