Biochemistry For Sport And Exercise Science:

Biochemistry for Sport and Exercise Metabolism Donald MacLaren, James Morton, 2011-12-12 How do our muscles produce energy for exercise and what are the underlying biochemical principles involved These are questions that students need to be able to answer when studying for a number of sport related degrees This can prove to be a difficult task for those with a relatively limited scientific background Biochemistry for Sport and Exercise Metabolism addresses this problem by placing the primary emphasis on sport and describing the relevant biochemistry within this context The book opens with some basic information on the subject including an overview of energy metabolism some key aspects of skeletal muscle structure and function and some simple biochemical concepts It continues by looking at the three macromolecules which provide energy and structure to skeletal muscle carbohydrates lipids and protein The last section moves beyond biochemistry to examine key aspects of metabolism the regulation of energy production and storage Beginning with a chapter on basic principles of regulation of metabolism it continues by exploring how metabolism is influenced during high intensity prolonged and intermittent exercise by intensity duration and nutrition Key Features A clearly written well presented introduction to the biochemistry of muscle metabolism Focuses on sport to describe the relevant biochemistry within this context In full colour throughout it includes numerous illustrations together with learning objectives and key points to reinforce learning Biochemistry for Sport and Exercise Metabolism will prove invaluable to students across a range of sport related courses who need to get to grips with how exercise mode intensity duration training status and nutritional status can all affect the regulation of energy producing pathways and more important apply this understanding to develop training and nutrition programmes to maximise athletic performance *Biochemistry for Sport and Exercise Metabolism* Donald MacLaren, James Morton, 2024-09-30 All new edition of an introductory textbook on sport and exercise biochemistry and muscle metabolism Biochemistry for Sport and Exercise Metabolism initially examines the essence of the biochemistry of the macronutrients before exploring how exercise mode intensity and duration training status and nutritional status affects the regulation of energy producing pathways enabling readers to apply this understanding to develop training and nutrition programs that maximize athletic performance This textbook includes an overview of energy metabolism skeletal muscle structure and function and related biochemical concepts carbohydrates lipids and proteins metabolism regulation of metabolism and factors that can influence metabolism and fatigue This revised and updated second edition reflects some of the latest advances in the field with new content on metabolic regulation as well as adaptations to high intensity and strength exercise endurance exercise and intermittent exercise Furthermore there is a new chapter on biochemical techniques to provide some pertinent background on how reported metabolic changes during exercise are achieved This textbook features learning objectives keywords and key points in each chapter to aid in reader comprehension and reinforce information retention Written by two highly qualified authors Biochemistry for Sport and Exercise Metabolism discusses sample topics including

How the energy supply for muscle contraction is achieved from carbohydrates lipids and protein Muscle contraction covering propagation of the action potential excitation contraction coupling and the sliding filament mechanism Regulation of the energy systems providing energy for exercise Techniques for exercise metabolism including respiratory analysis ergometry blood sampling metabolomics a v differences muscle biopsy and isotopes Exploration of the metabolic events occurring during high intensity endurance and high intensity intermittent forms of exercise Clearly written and completely comprehensive the second edition of Biochemistry for Sport and Exercise Metabolism continues to be an invaluable learning resource for students across a wide range of sport related courses Exercise Biochemistry Vassilis Mougios,2020 Exercise Biochemistry Second Edition offers a clear explanation of how exercise affects molecular level functioning in athletes and nonathletes both healthy and diseased Biochemistry Primer for Exercise Science 4th Edition Michael E. Biochemistry of Exercise and Training Ron J. Maughan, Michael Gleeson, Paul L. Greenhaff, 1997 Sports Science is a rapidly expanding area with student numbers on University courses increasing faster than for many other academic subjects While there are a large number of suitable texts on exercise physiology there has of yet been no such text for the area of exercise biochemistry Biochemistry is also an area that students taking these courses usually have the greatest difficulty in understanding The Biochemistry of exercise and training provides a broadly based introduction to those aspects of biochemistry relevant to exercise science For students of biochemistry physiology and sports science the book will enable them to develop a solid understanding of the fundamentals of biochemistry Throughout the focus is on physiological chemistry dealing with those biochemical processes that determine the metabolic response to exercise and the way in which these responses are influenced by training The authors have taken account of the rapid advances being made in the field of physiological chemistry and by providing the reader with a broad understanding of the fundamental concepts they should then be able to integrate these future developments with their existing knowledge of the area
