The Sensory Ecology of Birds Graham R. Martin,2017-03-30 Birds are renowned for their exceptional vision and the way that this enables them to survive and navigate the world in such a unique way However it is now recognised that avian behaviour is guided by information drawn from many different senses which are then used in integrated and complementary ways to answer the many different sensory challenges posed by specific environments and particular tasks Understanding how sensory information is used by birds has important applications in conservation such as providing vital insights into why birds are prone to collisions with structures like power lines and wind turbines and why so many diving birds become entrapped in nets A sensory ecology approach suggests how these problems can be mitigated The Sensory Ecology of Birds ranges widely across species environments and behaviours to present a synthesis that challenges previous assumptions about the information that controls the behaviour of birds A bird may use a wide range and combination of sensory information that comes from sight hearing smell mechanoreception taste and magnetoreception It may also include specific refinements of senses such as echolocation and remote touch from the bill The book recognises that there are many complex and subtle trade offs and complementarities of information between different types of sensory information This accessible text will be of interest to a wide ornithological readership from undergraduates to researchers as well as a broader audience of behavioural ecologists and evolutionary biologists

Reproductive Biology and Phylogeny of Birds, Part A: Barrie G M Jamieson,2007 Aspects of reproduction covered in this volume include classification and phylogeny as revealed by molecular biology anatomy of the male reproductive tract and organs development and anatomy of the female reproductive tract and more

Ornithology Michael L. Morrison,Amanda D. Rodewald,Gary Voelker,Melanie R. Colón,Jonathan F. Prather,2018-09-03 The essential text for ornithology courses this book will leave students with a lifelong understanding and appreciation of the biology and ecology of birds Aves the birds is the wildlife group that people most frequently encounter With over 10 000 species worldwide these animals are part of our everyday experience They are also the focus of intense research and their management and conservation is a subject of considerable effort throughout the world But what are the defining attributes that make a bird a bird Aimed at undergraduate and graduate students Ornithology provides a solid modern foundation for understanding the life and development of birds Written by renowned experts from around the globe this comprehensive textbook draws on the latest

research to create an innovative learning experience Moving beyond bones muscle and feathers it provides the core information needed to build the bird linking anatomy and physiology with ecology and behavior As it reviews the major orders of birds the book highlights their wide diversity and critically evaluates ornithological concepts and theories Incorporating brief biographies of leaders in the field the text describes their contributions in the context of key historical events in bird science Each chapter ends with a summary of the material covered a discussion of potential management and conservation applications and suggested study questions that will stimulate thought and discussion Contributors Peter Arcese George E Bentley Lori A Blanc William M Block Alice Boyle Leonard A Brennan Luke K Butler Zac Cheviron Luis M Chiappe Melanie R Col n Caren B Cooper Robert J Cooper Jamie M Cornelius Carlos Martinez Del Rio John Dumbacher Shannon Farrell Maureen Flannery Geoffrey Geupel Patricia Adair Gowaty Thomas P Hahn Ashley M Heers Fritz Hertel Geoffrey E Hill Matthew Johnson Lukas F Keller Dylan C Kesler Pablo Sabat Kirkwood John Klicka Christopher A Lepczyk Ashley M Long Scott R Loss Graham R Martin John M Marzluff Susan B McRae Michael L Morrison Timothy J O Connell Jen C Owen Marco Pavia Jeffrey Podos Lars Pomara Jonathan F Prather Marco Restani Alejandro Rico Guevara Amanda D Rodewald Vanya G Rohwer Matthias Starck Michael W Strohbach S Ma eika P Sullivan Diego Sustaita Kerri T Vierling Gary Voelker Margaret A Voss Jeff R Walters Paige S Warren Elisabeth B Webb Michael S Webster Eric M Wood Robert M Zink Benjamin Zuckerberg

Effects of Climate Change on Birds Peter O. Dunn, Anders Pape Møller, 2019-07-16 Climate change issues are attracting rapidly increasing interest from a wide range of biologists due to their unprecedented effects on global biodiversity although there remains a lack of general knowledge as to the environmental consequences of such rapid change Compared with any other class of animals birds provide more long term data and extensive time series a more geographically and taxonomically diverse source of information a richer source of data on a greater range of topics dealing with the effects of climate change and a longer tradition of extensive research The first edition of the book was widely cited and this new edition continues to provide an exhaustive and up to date synthesis of our rapidly expanding level of knowledge as it relates to birds highlighting new methods and areas for future research

Birds of Two Worlds Russell Greenberg, Peter P. Marra, 2005-05-02 For centuries biologists have tried to understand the underpinnings of avian migration where birds go and why why some migrate and some do not how they adapt to a changing environment and how migratory systems evolve Twenty five years ago the answers to many of these questions were addressed by a collection of migration experts in Keast and Morton s classic work *Migrant Birds in the Neotropics* In 1992 Hagan and Johnston published a follow up book *Ecology and Conservation of Neotropical Migrant Landbirds* In *Birds of Two*

Worlds Russell Greenberg and Peter Marra bring together the world's experts on avian migration to discuss its ecology and evolution. The contributors move the discussion of migration to a global stage looking at all avian migration systems and delving deeper into the evolutionary foundations of migratory behavior. Readers interested in the biology, behavior, ecology, and evolution of birds have waited a decade to see a worthy successor to the earlier classics. *Birds of Two Worlds* will complete the trilogy and become indispensable for ornithologists, evolutionary biologists, serious birders, and public and academic libraries.
