

CHAPTER 5: PROBABILITY

QUESTION 1

You apply for graduate trainee positions at two companies. Let event A represent receiving an offer from the first company. Let event B represent receiving an offer from the second company.

- Explain why events A and B are not exhaustive.
- Explain why events A and B are not mutually exclusive.

MEMO:

- Events are considered exhaustive if they include all outcomes in the sample space. Events A and B are not exhaustive because you may not get an offer from either firm.
- Events are mutually exclusive if they do not share any common outcome of an experiment. Events A and B are not mutually exclusive because you may get an offer from both firms. Both events can occur together, therefore, they are not mutually exclusive.

QUESTION 2

The probability that project A will be completed on time is 0.40 and that project B will be completed on time is 0.60. Further, if project B is completed on time, the probability that project A will also be completed on time is 0.50

- What is the probability that at least one of the projects will be completed on time?
- Are events A and B mutually exclusive? Explain.

MEMO:

Event A = Project A completion

Event B = Project B completion

$$P(A) = 0.40$$

$$P(B) = 0.60$$

$$P(A|B) = 0.50 \text{ (Project } A \text{ is completed on time given that Project } B \text{ is completed on time)}$$

Excel Essential Skills A. S. Kalra, 2004 *ACSM's Guidelines for Exercise Testing and Prescription* American College of Sports Medicine, 2013-03-04 The flagship title of the certification suite from the American College of Sports Medicine ACSM's *Guidelines for Exercise Testing and Prescription* is a handbook that delivers scientifically based standards on exercise testing and prescription to the certification candidate the professional and the student The 9th edition focuses on evidence based recommendations that reflect the latest research and clinical information This manual is an essential resource for any health fitness and clinical exercise professional physician nurse physician assistant physical and occupational therapist dietician and health care administrator This manual gives succinct summaries of recommended procedures for exercise testing and exercise prescription in healthy and diseased patients *Introduction to Statistical Measures for the Social and Behavioral Sciences* Perry E. Jacobson, 1976 *Statistics* Ann E. Watkins, Richard L. Scheaffer, George W. Cobb, 2011 *Statistics* 2nd Edition teaches statistics with a modern data analytic approach that uses graphing calculators and statistical software It allows more emphasis to be put on statistical concepts and data analysis rather than following recipes for calculations This gives readers a more realistic understanding of both the theoretical and practical applications of statistics giving them the ability to master the subject **Statistics for Management** Richard I. Levin, 1984 **Journal of Educational Research Monographs** Burdette Ross Buckingham, 1921 Social Research Bruce C. Straits, Royce A. Singleton, Jr., Royce Singleton, 2017-12-05 Revised and updated in its sixth edition *Social Research Approaches and Fundamentals* is a rigorous yet clear and engaging introduction to research methods Covering all of the fundamentals in a straightforward student friendly manner it is ideal for undergraduate and graduate level courses across the social sciences and also serves as an indispensable guide for researchers Striking a balance between specific techniques and the underlying logic of scientific inquiry this book provides a lucid treatment of the four major approaches to research experimentation survey research field research and the use of available data Richly developed examples of empirical research and an emphasis on the research process enable students to better understand the real world application of research methods The authors also offer a unique chapter 13 advocating a multiple methods strategy New to this edition Updated references and research examples throughout Updated data in tables and figures Improved clarity and flow of chapters New sections and sub sections on topics such as Big Data and Publishing a Research Paper *Statistics of Earth Science Data* Graham J. Borradaile, 2013-11-11 The *Goals of Data Collection and Its Statistical Treatment in the Earth Sciences* The earth sciences are characterised by loose and complex relationships between variables and the necessity to understand the geographical distribution of observations as well as their frequency distribution Our frequency distributions and the looseness of relationships reflect the complexity and intrinsic natural variation in nature more than measurement error Furthermore earth scientists cannot design experiments according to statistical recommendation because the availability and complexity of data are beyond our control Usually the

system we are studying cannot be isolated into discrete independent variables These factors influence the first steps of research how and where to collect specimens or observations Some issues are particularly troublesome and common in earth science but are rarely handled in an undergraduate statistics course These include spatial sampling methods orientation data regionalised variables time series identification of cyclicity and pattern discrimination multivariate systems lurking variables and constant sum data It is remarkable that most earth science students confront these issues without formal training or focused consideration
