The Assumptions Economists Make Jonathan Schlefer, 2012-03-20 Economists make confident assertions in op ed columns and on cable news so why are their explanations at odds with equally confident assertions from other economists And why are all economic predictions so rarely borne out Harnessing his frustration with this contradiction Schlefer set out to investigate how economists arrive at their

opinions *The Economics of Scientific Misconduct* James R. Wible, 2022-08-18 *The Economics of Scientific Misconduct* explores episodes of misconduct in the natural and biomedical sciences and replication failure in economics and psychology over the past half century Here scientific misconduct is considered from the perspective of a single discipline such as economics likely for the first time in intellectual history Research misconduct has become an important concern across many natural medical and social sciences including economics over the past half century Initially a mainstream economic approach to science and scientific misconduct draws from conventional microeconomics and the theories of Becker Ehrlich and C S Peirce s economy of research Then the works of Peirce and Thorstein Veblen from the 19th century point toward contemporary debates over statistical inference in econometrics and the failure of recent macroeconomic models In more contemporary economics clashes regarding discrimination and harassment have led to a Code of Professional Conduct from the American Economic Association and a Code of Ethics from one of its members The last chapter considers research ethics matters related to the COVID 19 pandemic There has been an explosion of research and some retractions More generally a concern with research ethics contributes to scientific progress by making some of its most difficult problems more transparent and understandable and thus possibly more surmountable This book offers valuable insights for students and scholars of research ethics across the sciences philosophy of science and social science and economic theory *Bulls, Bears & Golden Calves* John E. The Lost Art of Economics David C. Colander, 2001 Economics is the study of a complex system in which simple laws are not always forthcoming That complexity mandates three branches of the profession positive normative and the art of economics The economics profession has focused on one of these positive economics and in doing so has lost the art of economics In a series of provocative essays the author argues that most of what economists do is applied policy which belongs in the art of economics not in normative or positive economics The essays explore the forces in academic institutions that have led economics to its current position as well as the implications of the lost art for the economics profession and its future In the end the author is positive about the future of the profession and predicts that in 2050 it will no longer be as Solow suggested it currently is the overeducated in pursuit of the unknowable Instead it will be the appropriately educated in search of the knowable The essays are written in a highly accessible style and can be enjoyed by most non economists as well

as by those economists who don't take themselves too seriously It can be usefully read by all economists even those who do take themselves too seriously *Money and Markets* Roger Koppl, 2006-09-27 A number of top class contributors including James Buchanan Gordon Tullock David Colander Deirdre McCloskey and Roger Garrison have been brought together to produce a festschrift in honor of the important and celebrated economist Leland Yeager **The British National**
