Chen, Marta Lewicka, Dehua Wang, 2011-04-19 This volume contains the proceedings of the Summer Program on Nonlinear Conservation Laws and Applications held at the IMA on July 13-31, 2009. Hyperbolic conservation laws is a classical subject which has experienced vigorous growth in recent years. The present collection provides a timely survey of the state of the art in this exciting field and a comprehensive outlook on open problems. Contributions of more theoretical nature cover the following topics: global existence and uniqueness theory of one-dimensional systems; multidimensional conservation laws in several space variables and approximations of their solutions; mathematical analysis of fluid motion; stability and dynamics of viscous shock waves; singular limits for viscous systems; basic principles in the modeling of turbulent mixing; transonic flows past an obstacle and a fluid dynamic approach for isometric embedding in geometry; models of nonlinear elasticity; the Monge problem and transport equations with rough coefficients. In addition, there are a number of papers devoted to applications. These include models of blood flow; self-gravitating compressible fluids; granular flow; charge transport in fluids; and the modeling and control of traffic flow on networks.
