Chaotic Electronics in Telecommunications Michael Kennedy, Riccardo Rovatti, Gianluca Setti, 2018-10-03 At the code level discrete time chaotic systems can be used to generate spreading codes for DS SS systems At the signal level continuous time chaotic systems can be used to generate wideband carriers for digital modulation schemes The potential of chaos engineering is now recognized worldwide with research groups actively pursuing the exploitation of chaotic phenomena in cryptography spread spectrum communications electromagnetic interference reduction and many other applications Although some noteworthy results have already been achieved until now the field has lacked both a systematic treatment of these developments and a careful quantitative comparison of chaos based and conventional techniques Chaotic Electronics in Telecommunications fills both of those needs It addresses the use of chaos in digital communications applications from the coding level to circuit design Each chapter offers a formal exposition of the theoretical and engineering tools needed to apply chaos followed by discussion of the algorithms and circuits needed to apply the theory to real world communications systems

Evolution in Signal Processing and Telecommunication Networks Vikrant Bhateja, P. Satish Rama Chowdary, Wendy Flores-Fuentes, Shabana Urooj, Rudra Sankar Dhar, 2024-04-22 The book discusses the latest developments and outlines future trends in the fields of microelectronics electromagnetics and telecommunication It contains original research works presented at the International Conference on Microelectronics Electromagnetics and Telecommunication ICMEET 2023 organized by Department of Electronics and Communication Engineering National Institute of Technology Mizoram India during October 6 7 2023 The book is divided into two volumes and it covers papers written by scientists research scholars and practitioners from leading universities engineering colleges and R D institutes from all over the world and share the latest breakthroughs in and promising solutions to the most important issues facing today s society

synchronization with applications in selected areas Chaos-Based Digital Communication Systems Francis C.M. Lau, Chi K. Tse, 2013-03-09 In the 1970 s and 1980 s we saw phenomenal advancement in nonlinear science which had led to many important discoveries that greatly improve our understanding of the physical world Among them the discovery of chaos in deterministic systems is unarguably one of the most revolutionary scientific findings We are now able to explain the apparent complexity and subtle order exhibited by many physical systems under the unified framework of chaos theory The past decade has seen heightened interest in the exploitation of chaos for useful applications in engineering systems One application area that has attracted a great deal of attention is communications Chaotic signals by virtue of their wide band characteristic are natural candidates for carrying information in a spread spectrum communication environment The use of chaotic signals in communications thus naturally inherits the advantages that are currently being offered by conventional spread spectrum communication systems such as robustness in multi path environments resistance to jamming low probability of interception etc In addition chaotic signals are easy to generate and hence offer a potentially low cost solution to spread spectrum communications Although many practical problems need to be solved before chaos based communications can be realized in practice the field has advanced rapidly during the past few years and it now reaches a point where abstract concepts from physics and mathematics have been fruitfully ported to techniques that allow information to be carried by chaotic signals Computer Science for Environmental Engineering and EcoInformatics Yuanxu Yu, Zhengtao Yu, Jingying Zhao, 2011-07-18 This two volume set CCIS 158 and CCIS 159 constitutes the refereed proceedings of the International Workshop on Computer Science for Environmental Engineering and EcoInformatics CSEEE 2011 held in Kunming China in July 2011 The 150 revised full papers presented in both volumes were carefully reviewed and selected from a large number of submissions The papers are organized in topical sections on computational intelligence computer simulation computing practices and applications ecoinformatics image processing information retrieval pattern recognition wireless communication and mobile computing artificial intelligence and pattern classification computer networks and Web computer software data handling and applications data communications data mining data processing and simulation information systems knowledge data engineering multimedia applications **IEEE Transactions on Circuits and Systems**, 2006 **Neural Information Processing** Tadahiro Taniguchi, Chi Sing Andrew Leung, Tadashi Kozuno, Junichiro Yoshimoto, Mufti Mahmud, Maryam Daborjeh, Kenji Doya, 2025-11-05 The six volume set constitutes the refereed proceedings of the 32nd International Conference on Neural Information Processing ICONIP 2025 held in Okinawa Japan in November 2025 The 197 full papers presented in this book were carefully selected and reviewed from 1092 submissions The conference focuses on three main areas i e Theory and Algorithms Computational Neurosciences and Applications and Frontiers

Digital Communications with Chaos Wai M Tam, Francis C. M. Lau, Chi K Tse, 2007 Since the 1970 s there has been a great deal of research effort spent on studying chaotic systems and the properties of the chaotic signals generated

Characterized by their wideband impulse like autocorrelation and low cross correlation properties chaotic signals are useful spread spectrum signals for carrying digital information Spectrum spreading has become one of the most popular modulation techniques for high speed wireless communications It makes use of signals of very wide bandwidth to carry information at relatively low data rates and possesses advantages such as low probability of interception resistance to jamming multiple access capability and mitigation to multipath effect which are particularly important in a wireless scenario In addition to enjoying the aforementioned benefits chaotic signals can be generated using simple circuitries thus lowering the cost of transceivers Early study of chaos based communication systems was focused on a single user case In the past few years more effort has been put on investigating systems with multiple access capability which is a key feature of spread spectrum communication systems

Digital Communications with Chaos presents a detailed study of some multiple access schemes used for chaos based communications and evaluates their performance In addition the effectiveness of the multiuser detection techniques whose primary objective is to reduce interference between users and hence improve performance is evaluated in the context of multiple access digital communication systems
