*Mooring System Engineering for Offshore Structures* Kai-Tung Ma, Yong Luo, Chi-Tat Thomas Kwan, Yongyan Wu, 2019-06-04 The mooring system is a vital component of various floating facilities in the oil gas and renewables industries. However, there is a lack of comprehensive technical books dedicated to the subject. *Mooring System Engineering for Offshore Structures* is the first book delivering in-depth knowledge on all aspects of mooring systems from design and analysis to installation, operation, maintenance, and integrity management. The book gives beginners a solid look at the fundamentals involved during mooring designs with coverage on current standards and codes, mooring analysis, and theories behind the analysis techniques. Advanced engineers can stay up-to-date through operation integrity management and practical examples provided. This book is recommended for students majoring in naval architecture, marine or ocean engineering, and allied disciplines in civil or mechanical engineering. Engineers and researchers in the offshore industry will benefit from the knowledge presented to understand the various types of mooring systems, their design, analysis, and operations. Understand the various types of mooring systems and the theories behind mooring analysis. Gain practical experience and lessons learned from worldwide case studies. Combine engineering fundamentals with practical applications to solve today's offshore challenges.

*Deepwater Mooring Systems*, 2003 **Deepwater Mooring Systems** Jun Zhang, Richard Steven Mercier, 2003 This collection contains 24 papers presented at the 2003 International Symposium on Deepwater Mooring Systems: Concepts, Design, Analysis, and Materials held in Houston, Texas, October 2-3, 2003. *Frontiers in Offshore Geotechnics* Susan Gourvenec, Mark Cassidy, 2005-10-13 The present work contains 150 papers that were presented during ISEC 03, the 3rd International Conference on Structural and Construction Engineering, that was held in Tokuyama College of Technology, Shunan, Japan, from September 20 to 23, 2005. The theme of the conference was Collaboration and Harmony of Creative Systems. The conference was to encourage and assist the collaboration of any and all kinds of structural system and construction engineering using information technology in an environmentally friendly manner. This book contains these challenging papers.

*Practical Design of Ships and Mobile Units* Marinus Willem Cornelis Oosterveld, S. G. Tan, 1998 These proceedings contain the papers presented at the 7th International Symposium on Practical Design of Ships and Mobile Units. The symposium was held at the Congress Centre in The Hague, The Netherlands, on 20-25 September 1998. The overall aim of PRADS conferences is to advance the design of ships and mobile marine structures through the exchange of knowledge and the promotion of discussions on relevant topics in the fields of naval architecture and marine and offshore engineering. Greater international co-operation of this kind can help improve design and production methods and so increase the efficiency, economy, and safety of ships and mobile units. The main themes of this symposium are design, synthesis, production, ship hydrodynamics, ship structures and materials, and offshore engineering. Some topics which attracted many papers were design loads, design for ultimate strength, impact of safety and environment, grounding and collision resistance, and flow

seakeeping fatigue considerations and propulsor and propulsion systems *Deepwater Foundations and Pipeline Geomechanics* William McCarron,2011-09-01 Practicing engineers in the offshore engineering industry will find in this contributed handbook practical information on current oil field production development practices for foundations and subsea flowlines The technical challenges associated with deepwater developments have led to significant innovations The contributors are practicing engineers and academics who have been at the forefront of offshore geotechnic development for several decades Until the 1980s the most common design concerns for offshore foundation and pipeline engineering were associated with extreme storm loadings earthquakes mudflows fatigue and installation activities Engineers today face additional concerns including submarine slope failures thermal buckling of pipelines catenary riser interaction with the seafloor vortex induced vibration of flowlines shallow water flows encountered during drilling operations and thermal interaction of pipelines with permafrost This handbook describes recent advances in geophysical data acquisition and evaluation as they relate to offshore developments as well as foundation and pipeline design considerations The presentation is focused on deepwater geotechnics as well as subsea and Arctic pipeline design considerations but engineers will find much of it applicable to other situations **Proceedings of the ... *Development of Design Tool for Statically Equivalent Deepwater Mooring Systems* Ikpoto Enefiok Udoh,2010 Verifying the design of floating structures adequately requires both numerical simulations and model testing a combination of which is referred to as the hybrid method of design verification The challenge in direct scaling of moorings for model tests is the depth and spatial limitations in wave basins It is therefore important to design and build equivalent mooring systems to ensure that the static properties global restoring forces and global stiffness of the prototype floater are matched by those of the model in the wave basin prior to testing A fit for purpose numerical tool called STAMOORSYS is developed in this research for the design of statically equivalent deepwater mooring systems The elastic catenary equations are derived and applied with efficient algorithm to obtain local and global static equilibrium solutions A unique design page in STAMOORSYS is used to manually optimize the system properties in search of a match in global restoring forces and global stiffness Up to eight mooring lines can be used in analyses and all lines have the same properties STAMOORSYS is validated for single line mooring analysis using LINANL and Orcaflex and for global mooring analysis using MOORANL and Orcaflex A statically equivalent deepwater mooring system for a representative structure that could be tested in the Offshore Technology Research Center at Texas A M University is then designed using STAMOORSYS and the results are discussed **European Communities Oil and Gas Technological Development Projects** Commission of the European Communities,1990-09-30 Introduction IX Community Energy Research and Development Strategy Programme Characteristics Implementation and Supervision Structure Status of Implementation Diffusion of Knowledge and Results Information for Future Proponents Breakdown of Support by Sector Breakdown of Projects by Sector Geophysics and Prospecting Drilling 57 Production Systems 79 Secondary and Enhanced Recovery 183 Environmental Influence on Offshore 245 Auxiliary Ships and Submersibles 253 Pipelines 271 Transport 289 Natural Gas Technology 313 Energy Sources 323 Storage 333 Miscellaneous 343 v PREFACE The 1973 oil crisis highlighted the dependency of the Community on imported hydrocarbons to satisfy its energy demand Therefore in order to improve security of supply the Community has developed since 1973 a programme assisting the oil industry to develop new technologies required for exploiting oil and gas resources outside and inside the Community territories This programme Regulations 3056 73 and 3639 85 has allowed remarkable achievements in a sector where innovation is needed to take up the challenge of producing oil and gas in difficult environments This report shows the achievements of the Community programme It gives evidence of the high technical level which has already been
