Ian Sneddon Solutions Partial:

Elements of Partial Differential Equations Ian N. Sneddon, 2006-01-01 Geared toward students of applied rather than pure mathematics this volume introduces elements of partial differential equations Its focus is primarily upon finding solutions to particular equations rather than general theory Topics include ordinary differential equations in more than two variables partial differential equations of the first and second orders Laplace's equation the wave equation and the diffusion equation A helpful Appendix offers information on systems of surfaces and solutions to the odd numbered problems appear at the end of the book Readers pursuing independent study will particularly appreciate the worked examples that appear throughout the text

Mathematical Methods for Scientists and Engineers Donald Allan McQuarrie, 2003 Intended for upper level undergraduate and graduate courses in chemistry physics math and engineering this book will also become a must have for the personal library of all advanced students in the physical sciences Comprised of more than 2000 problems and 700 worked examples that detail every single step this text is exceptionally well adapted for self study as well as for course use From publisher description

Non-Standard and Improperly Posed Problems

William F. Ames, Brian Straughan, 1997-07-07 Written by two international experts in the field this book is the first unified survey of the advances made in the last 15 years on key non standard and improperly posed problems for partial differential equations This reference for mathematicians scientists and engineers provides an overview of the methodology typically used to study improperly posed problems It focuses on structural stability the continuous dependence of solutions on the initial conditions and the modeling equations and on problems for which data are only prescribed on part of the boundary The book addresses continuous dependence on initial time and spatial geometry and on modeling backward and forward in time It covers non standard or non characteristic problems such as the sideways problem for a heat or hyperbolic equation and the Cauchy problem for the Laplace equation and other elliptic equations The text also presents other relevant improperly posed problems including the uniqueness and continuous dependence for singular equations the spatial decay in improperly posed parabolic problems the uniqueness for the backward in time Navier Stokes equations on an unbounded domain the improperly posed problems for dusty gases the linear thermoelasticity and the overcoming Holder continuity and image restoration Provides the first unified survey of the advances made in the last 15 years in the field Includes an up to date compendium of the mathematical literature on these topics
