Lauren Gardner

Protector Known Space Larry Niven:

Protector Larry Niven, 1992 **Protector A** Larry Niven, 2001-03-01 *The Guide to Larry Niven's Ringworld* Kevin Stein, Todd Hamilton, 1994 A comprehensive guide to one of science fiction's most exciting created universes **An Informal History of the Hugos** Jo Walton, 2018-08-07 Engaged, passionate, and consistently entertaining, this is a book for those who enjoyed Walton's previous collection of essays from Tor.com, the Locus Award-winning *What Makes This Book So Great*. The Hugo Awards, named after pioneer science fiction publisher Hugo Gernsback and voted on by members of the World Science Fiction Society, have been given out since 1953. They are widely considered the most prestigious award in science fiction. Between 2010 and 2013, Jo Walton wrote a series of posts for Tor.com surveying the Hugo finalists and winners from the award's inception up to the year 2000. Her contention was that each year's full set of finalists generally tells a meaningful story about the state of science fiction at that time. Walton's cheerfully opinionated and vastly well-informed posts provoked valuable conversation among the field's historians. Now these posts, lightly revised, have been gathered into this book along with a small selection of the comments posted by SF luminaries such as Rich Horton, Gardner Dozois, and the late David G. Hartwell. *Wizards, Aliens, and Starships* Charles L. Adler, 2014-02-02 A great book by itself or as a starting point for exploring the physics of space exploration as well as the classics in science fiction. Robert Schaefer, *New York Journal of Books*. From teleportation and space elevators to alien contact and interstellar travel, science fiction and fantasy writers have come up with some brilliant and innovative ideas. Yet how plausible are these ideas? For instance, could Mr. Weasley's flying car in the Harry Potter books really exist? Which concepts might actually happen, and which ones wouldn't work at all? *Wizards, Aliens, and Starships* delves into the most extraordinary details in science fiction and fantasy, such as time warps, shape-changing rocket launches, and illumination by floating candles, and shows readers the physics and math behind the phenomena. With simple mathematical models and, in most cases, using no more than high school algebra, Charles Adler ranges across a plethora of remarkable imaginings from the works of Ursula K. Le Guin to *Star Trek* and *Avatar* to explore what might become reality. Adler explains why fantasy in the Harry Potter and Dresden Files novels cannot adhere strictly to scientific laws and when magic might make scientific sense in the muggle world. He examines space travel and wonders why it isn't cheaper and more common today. Adler also discusses exoplanets and how the search for alien life has shifted from radio communications to space-based telescopes. He concludes by investigating the future survival of humanity and other intelligent races. Throughout, he cites an abundance of science fiction and fantasy authors and includes concise descriptions of stories as well as an appendix on Newton's laws of motion. *Anatomy of Wonder* Neil Barron, 1981 **The Mammoth Encyclopedia of Science Fiction** George Mann, 2012-03-01 This encyclopedia is the most up-to-date, concise, clear, and affordable guide to all aspects of science fiction, from its background to generic themes and devices from authors established and new to films. Science fiction has evolved into one of the most popular, cutting-edge, and exciting fiction genres with a

proliferation of modern and classic authors themes and ideas movies TV series and awards Arranged in an A Z format and featuring a comprehensive index and cross referencing system The Mammoth Encyclopedia of Science Fiction is also the most accessible and easy to use encyclopedia of its kind currently available
