**Psycholinguistics** Joseph F. Kess, 1992-01-01 This textbook is designed to serve as an introduction to the interdisciplinary field of psycholinguistics. It is directed at filling the reading needs of courses in departments of linguistics and of psychology, presenting an integrated overview of the ways in which both disciplines have investigated the learning, production, comprehension, storage, and recall of natural languages. Also detailed are those research topics that have captured the interests of psycholinguists over the past few decades. Some current topics included are modularity vs interactionism, the role of parsing strategies in sentence comprehension, and accessing the mental lexicon in word recognition. Earlier topics that have attracted considerable energy not so long ago, such as sound symbolism and linguistic relativity, are also investigated in some detail. Psycholinguistics is an enquiry into the psychology of language, but the facts of language are what generate theories about why language is learned, produced, and processed the way it is. Thus, there is a wide array of examples from the languages of the world intended to provide a feeling for what the nature and range of human language are like.

*Psycholinguistics* Michael Garman, 1990-09-28 An introduction to psycholinguistics, the study of human language processing, which deals with the central area of the linguistically mature monolingual adult's language abilities.

**Psycholinguistics** John Field, 2004 This volume offers over 170 entries covering the key areas of psycholinguistics: psychological processes, first language acquisition, the nature of language, brain and language, and language disorders, and thus provides a resource for students of English language, linguistics, and psychology. Psycholinguistics Donald J. Foss, David T. Hakes, 1978 Psycholinguistics John Field, 2003 Routledge English Language Introductions cover core areas of language study and are one-stop resources for students. Assuming no prior knowledge, books in the series offer an accessible overview of the subject with activities, study questions, commentaries, and key readings, all in the same volume. The innovative and flexible two-dimensional structure is built around four sections: introduction, development, exploration, and extension, which offer self-contained stages for study. Each topic can also be read across these sections, enabling the reader to build gradually on the knowledge gained. *Psycholinguistics* is a comprehensive introduction to psycholinguistic theory, covering the core areas of psycholinguistics: language as a human attribute, language and the brain, vocabulary, storage, and use of language, and memory. The four skills—writing, reading, listening, speaking, comprehension, language impairment, and deprivation—draw on a range of real texts, data, and examples, including a Radio Four interview, an essay written by a deaf writer, and the transcript of a therapy session addressing stuttering. Provides classic readings by the key names in the discipline, including Jean Aitchison, Terrence Deacon, Robert Logie, Willem Levelt, and Dorothy Bishop. Written by an experienced teacher, this accessible textbook is an essential resource for all students of English language, linguistics, and psychology.
