Wimpenny,2001-06-22 Time compression technologies such as rapid prototyping and manufacturing offer enormous potential benefits Where time can be saved in the development of new or modified products expenditure can also be reduced Swifter development can also give a competitive edge to those using these techniques However there are a number of different systems and processes that can be used Ensuring that the most appropriate rapid prototyping and manufacturing technology is applied to a problem is vital to the success of a project The case studies compiled by the experienced team of the Warwick Manufacturing Group at the University of Warwick in the UK represent a range of different real experiences drawn from a variety of industries using a range of materials and processes CONTENTS INCLUDE Overview of product design and development Computer aided design and rapid prototyping The introduction of CAD CAM in the ceramics industry Product design and development reverse engineering Reducing the risk of new product development by utilizing rapid prototyping technologies Stress analysis using rapid prototyping techniques Case studies in rapid prototyping and manufacturing techniques flow visualization using rapid prototype models Overview of utilizing bureau facilities Using bureau services Running an internal rapid prototyping bureau Overview of rapid casting techniques An alternative route to metal components for prototype and low volume production Rapid prototyping in pattern making and foundry applications Rapid prototyping enhancing product development at Parker Hannifin Cast tooling with rapid prototype patterns Overview of rapid tooling The role of rapid immediate production tooling IPT in new product development Rapid tooling cast resin and sprayed metal tooling *The Tube & Pipe Journal* ,2002 Directory of Foreign Firms Operating in the United States ,2010 *The Foundryman* ,2002 Industrial Ceramics ,2001 Machinery ,2004 **Manufacturing Engineering** ,2009 An Intelligent Inspection Planning System for Prismatic Parts on CMMs Slavenko M. Stojadinović,Vidosav D.

Majstorović,2019-02-09 This book examines an intelligent system for the inspection planning of prismatic parts on coordinate measuring machines CMMs The content focuses on four main elements the engineering ontology the model of inspection planning for prismatic parts on CMMs the optimisation model of the measuring path based on an ant colony approach and the model of probe configuration and setup planning based on a genetic algorithm The model of inspection planning for CMMs developed here addresses inspection feature construction the sampling strategy probe accessibility analysis automated collision free operation and probe path planning The proposed model offers a novel approach to intelligent inspection while also minimizing human involvement and thus the risk of human error through intelligent planning of the probe configuration and part setup The advantages of this approach include reduced preparation times due to the automatic generation of a measuring protocol potential optimisation of the measuring probe path i e less time needed for the actual measurement and increased planning process autonomy through minimal human involvement in the setup analysis and probe
