What is Emotion? Daniel and Amy Starch Research Professor of Psychology Emeritus Jerome Kagan,Jerome Kagan,2007-01-01 In this sophisticated overview of human emotions a widely respected psychologist and author addresses the ambiguities and embraces the controversies that surround this intriguing subject An insightful and lucid thinker Jerome Kagan examines what exactly we do know about emotions which popular assumptions about emotions are incorrect and how scientific study must proceed if we are to uncover the answers to persistent and evasive questions about emotions Integrating the findings of anthropological psychological and biological studies in his wide ranging discussion Kagan explores the evidence for great variation in the frequency and intensity of emotion among different cultures He also discusses variations among individuals within the same culture and the influences of gender class ethnicity and temperament on a person's emotional patina In his closing chapter the author proposes that three sources of evidence verbal descriptions of feelings behaviours and measures of brain states provide legitimate but different definitions of emotion Translating data from one of these sources to another may not be possible Kagan warns and those who study emotions must accept at least for now that their understanding is limited to and by the domain of their information

On the Origins of Human Emotions Jonathan Turner,2000-06-01 Language and culture are often seen as unique characteristics of human beings In this book the author argues that our ability to use a wide array of emotions evolved long before spoken language and in fact constituted a preadaptation for the speech and culture that developed among later hominids Long before humans could speak with words they communicated through body language their emotional dispositions and it is the neurological wiring of the brain for these emotional languages that represented the key evolutionary breakthrough for our species How

did natural selection work on the basic ape anatomy and neuroanatomy to create the hominid line The author suggests that what distinguished our ancestors from other apes was the development of an increased capacity for sociality and organization crucial for survival on the African savanna All apes display a propensity for weak ties individualism mobility and autonomy that was and is today useful in arboreal and woodland habitats but served them poorly when our ancestors began to move onto the African plain during the late Miocene The challenge for natural selection was to enhance traits in the species that would foster the social ties necessary for survival in the new environment The author suggests that the result was a development of certain areas of the primate brain that encouraged strong emotional ties allowing our ancestors to build higher levels of social solidarity Our basic neurological wiring continues to reflect this adaptive development From a sociological perspective that is informed by evolutionary biology primatology and neurology the book examines the current neurological bases of our emotional repertoire and their implications for our social actions
