

QUANTITY TAKE-OFF

Quantity take-off problems are relatively easy to figure out. You just need to know a little bit about geometry and use a little bit of engineering common sense. I will show you a couple tricks of the trade that will make life a little easier and there are a couple problems for you to practice to gain experience and confidence. The most likely questions that you will see during the exam are quantity take-off for:

1. Soil (excavation, loading, compaction),
2. Formwork for concrete,
3. Reinforcing steel, and
4. Road (pavement) finish, shell (concrete).

Check out the Example #1: To find the length of a excavation - the quantity take-off problem when the given dimensions are dimensions. The trick is the geometry of a drawing plus. If the dimensions are given for the excavation or the exact perimeter your calculation is different.

- If the dimensions are the excavation the calculation are easy.
The length of trench equals = $600 + 400 + 500 + 400 + 600 + 400 = 2500$.

However if the dimensions are the outside perimeter and **Marked as to be used for the Example #2 Method**, which just means measure the walls in the horizontal distance on the inside and in the vertical distance on the outside.

- The length of trench equals = $600 + 400 + 500 + 400 + 600 + 400 = 2500$.
