Intelligent Data Analysis for Real-Life Applications: Theory and Practice Magdalena-Benedito, Rafael, 2012-06-30
With the recent and enormous increase in the amount of available data sets of all kinds applying effective and efficient techniques for analyzing and extracting information from that data has become a crucial task Intelligent Data Analysis for Real Life Applications Theory and Practice investigates the application of Intelligent Data Analysis IDA to these data sets through the design and development of algorithms and techniques to extract knowledge from databases This pivotal reference explores practical applications of IDA and it is essential for academic and research libraries as well as students researchers and educators in data analysis application development and database management Social Networks Analysis and Mining Luca Maria Aiello, Tanmoy Chakraborty, Sabrina Gaito, 2025-01-24 This LNCS conference 4 volume set constitutes the proceedings of the 16th International Conference on Social Networks Analysis and Mining ASONAM 2024 in Rende Italy during September 2 5 2024 The 33 full papers together with 36 short papers included in this volume were carefully reviewed and selected from 167 submissions The conference covers a wide spectrum of research contributions to the foundations and applications of social networks Multidisciplinary Research in Arts, Science & Commerce (Volume-14) Chief Editor- Biplab Auddya, Editor- Dr. Merugu Madhusudan, Dr. Vani S V, Dr. Amita Singh, Dr. Deepa Mohan, Dr. Bhagyashree Baruah, Jalajakshi B N, 2024-12-12 **Supercomputing** Vladimir Voevodin, Sergey Sobolev, 2017-11-14 This book constitutes the refereed proceedings of the Third Russian Supercomputing Days RuSCDays 2017 held in Moscow Russia in September 2017 The 41 revised full papers and one revised short paper presented were carefully reviewed and selected from 120 submissions The papers are organized in topical sections on parallel algorithms supercomputer simulation high performance architectures tools and technologies *Ecological Mechanics* Mark Denny, 2015-12-29 An in depth exploration of how biomechanics and ecology work together Plants and animals interact with each other and their surroundings and these interactions with all their complexity and contingency control where species can survive and reproduce In this comprehensive and groundbreaking introduction to the emerging field of ecological mechanics Mark Denny explains how the principles of physics and engineering can be used to understand the intricacies of these remarkable relationships Denny opens with a brief review of basic physics before introducing the fundamentals of diffusion fluid mechanics solid mechanics and heat transfer taking care to explain each in the context of living organisms Why are corals of different shapes on different parts of a reef How can geckos climb sheer walls Why can birds and fish migrate farther than mammals How do desert plants stay cool The answers to these and a host of similar questions illustrate the principles of heat mass and momentum transport and set the stage for the book s central topic the application of these principles in ecology Denny shows how variations in the environment in both space and time affect the performance of plants and animals He introduces spectral analysis a mathematical tool for quantifying the patterns in which environments vary and uses it to analyze such

subjects as the spread of invasive species Synthesizing the book's materials the final chapters use ecological mechanics to predict the occurrence and consequences of extreme ecological events explain the emergence of patterns in the distribution and abundance of organisms and empower readers to explore further Ecological Mechanics offers new insights into the physical workings of organisms and their environment **Resources in Education** ,1984 **Designing and Implementing Interdisciplinary Education** Zehui Zhan,Siyuan Lyu,Shijing Niu,Kai Tu,Qingna Lai,2025-02-11 Interdisciplinary education is the future trend in global K 12 curriculum reform and all K 12 subject teachers should be prepared to meet the challenges it presents This book aims to explore the competence structure that K 12 teachers need to effectively design and implement interdisciplinary education from a general perspective of subject integration Drawing on relevant theories from interdisciplinary education and teacher competence research the book clarifies the fundamental connotations of teachers interdisciplinary teaching competence and identifies the key elements of this competence from an international perspective It also examines the transformation pathways for teachers from subject specific teaching to interdisciplinary teaching based on China's national curriculum framework On this basis the book constructs a framework for K 12 teachers interdisciplinary teaching competence and applies it to the cultivation of interdisciplinary teaching staff guiding the design of assessment tools improvement strategies and training programs for enhancing interdisciplinary teaching competence The book will encourage teachers from different disciplines to participate in the design and implementation of interdisciplinary teaching thereby promoting the sustainable development of interdisciplinary education Global educators and researchers interested in interdisciplinary education competence framework development teacher professional development and Chinese education will find valuable insights in this book **Mathematics and Science Curriculum Programs** ,2002 **Gene Manipulation in Plant Improvement II** J. Perry Gustafson,1990-12-31 There are clearly many directions in which the further development of the GUS gene fusion system can progress Some of these have been outlined above but others can be imagined There are no reasons to limit our conceptions of the use of GUS gene fusions to analysis and manipulation of single genes We can envision numerous marked genes perhaps with several new fusion systems giving valuable information about gene interaction or population structure The study of plant pathogen and plant symbiont interactions can progress rapidly with simple quantitative markers for genes and individuals We can imagine ways of using gene fusions to report on crop physiology or other complex phenotypes thereby enhancing the accuracy and speed of screening Introduction of the biosynthetic pathway for glucuronide detoxification by expressing genes for the UDP glucuronyl transferases in plants may result in novel mechanisms for plants to deal with xenobiotics such as insecticides or herbicides Synthesis of substrates which until now has been performed chemically resulting in expensive compounds can be done biosynthetically This should make the system not only the most powerful gene fusion system for agriculture but also the most accessible *Aerospace Medicine and Biology* ,1989 A selection of annotated references to unclassified reports and
