Calculations for Process Engineering Using Excel VBA Chi M. Phan,2023-12-01 Numerical Calculations for Process  
Engineering Using Excel VBA provides numerical treatment of process engineering problems with VBA programming and  
Excel spreadsheets The problems are solving material and energy balances optimising reactors and modelling multiple factor  
processes The book includes both basic and advanced codes for numerical calculations The basic methods are presented in  
different variations tailored to particular applications Some macros are combined with each other to solve engineering  
problems Examples include combining the bisection method and binary search to optimise an implicit correlation combining  
golden section search with Euler s method to optimise a reactor and combining bisection code and Euler s method to solve  
steady state heat distribution The text also includes nonconventional examples such as harmony search and network analysis  
The examples include solutions to common engineering problems such as adiabatic flame temperature plug flow reactor  
conversion batch reactor heat diffusion and pinch analysis of heat exchanger networks The VBA code is presented with  
mathematical equations and flowcharts enabling the audience to adopt the solutions to different problems The book contains  
many demonstrations of numerical techniques to guide users It also includes useful summaries of VBA commands functions  
and Excel predefined functions accessible in VBA While the book is developed primarily for undergraduate students the book
