phenomena of multiple scattering such as coherent scattering and memory effects Multiphysics applications that combine theories for different physical phenomena such as seismic coda waves stochastic wave theory heat diffusion and temperature rise in biological and other media Metamaterials and solitons in optical fibers nonlinear phenomena and porous media Primarily a textbook for graduate courses in electrical engineering Electromagnetic Wave Propagation Radiation and Scattering is also ideal for graduate students in bioengineering geophysics ocean engineering and geophysical remote sensing The book is also a useful reference for engineers and scientists working in fields such as geophysical remote sensing bio medical engineering in optics and ultrasound and new materials and integration with signal processing *Basic Health Physics* Joseph John Bevelacqua,1999 Radiation litigation the cleanup and decommissioning of nuclear facilities radon exposure nuclear medicine food irradiation stricter regulatory climate these are some of the reasons health physics and radiation protection professionals are increasingly called upon to upgrade their skills Designed to prepare candidates for the American Board of Health Physics Comprehensive examination Part I and other certification examinations *Basic Health Physics Problems and Solutions* introduces professionals in the field to radiation protection principles and their practical application in routine and emergency situations It features more than 650 worked examples illustrating concepts under discussion along with an in depth coverage of sources of radiation standards and regulations biological effects of ionizing radiation instrumentation external and internal dosimetry counting statistics monitoring and interpretations operational health physics transportation and waste nuclear emergencies and more Reflecting for the first time the true scope of health physics at an introductory level *Basic Health Physics Problems and Solutions* gives readers the tools to properly evaluate challenging situations in all areas of radiation protection including the medical university power reactor fuel cycle research reactor environmental non ionizing radiation and accelerator health physics Low Frequency Scattering George Dassios,Ralph Kleinman,2000 Scattering theory deals with the interactions of waves with obstacles in their path and low frequency scattering occurs when the obstacles involved are very small This book gives an overview of the subject for graduates and researchers for the first time unifying the theories covering acoustic electromagnetic and elastic waves A *Family of Solutions of Certain Nonautonomous Differential Equations by Series of Exponential Functions* Thomas Gilmer Proctor,H. H. Suber,1969 *Symposium Record* ,1993 **Scientific and Technical Books in Print** ,1972 **EE Systems Engineering Today** ,1966 Proceedings of the 1998 IEEE Radar Conference IEEE Aerospace and Electronic Systems Society,1998 Since the invention of radar each succeeding system solution has been challenged with increasing performance demands For the last decade added attention has been focused on lowering the life cycle cost Sometimes new technologies and or approaches introduce problems of their own RADARCON presents aspects of radar technology applications and signal data processing **Applied Mathematics, Modeling and Computer Simulation** Chi-Hua Chen,Andrea Scapellato,Alessandro Barbiero,Dmitry G. Korzun,2022-12-15 Applied mathematics together with modeling and

computer simulation is central to engineering and computer science and remains intrinsically important in all aspects of modern technology This book presents the proceedings of AMMCS 2022 the 2nd International Conference on Applied Mathematics Modeling and Computer Simulation held in Wuhan China on 13 and 14 August 2022 with online presentations available for those not able to attend in person due to continuing pandemic restrictions The conference served as an open forum for the sharing and spreading of the newest ideas and latest research findings among all those involved in any aspect of applied mathematics modeling and computer simulation and offered an ideal platform for bringing together researchers practitioners scholars professors and engineers from all around the world to exchange the newest research results and stimulate scientific innovation More than 150 participants were able to exchange knowledge and discuss the latest developments at the conference The book contains 127 peer reviewed papers selected from more than 200 submissions and ranging from the theoretical and conceptual to the strongly pragmatic all addressing industrial best practice Topics covered included mathematical modeling and application engineering applications and scientific computations and simulation of intelligent systems The book shares practical experiences and enlightening ideas and will be of interest to researchers and practitioners in applied mathematics modeling and computer simulation everywhere

**Digital Communications with Emphasis on Data Modems** Richard W. Middlestead, 2017-03-07 This book uses a practical approach in the application of theoretical concepts to digital communications in the design of software defined radio modems This book discusses the design implementation and performance verification of waveforms and algorithms appropriate for digital data modulation and demodulation in modern communication systems Using a building block approach the author provides an introductory to the advanced understanding of acquisition and data detection using source and executable simulation code to validate the communication system performance with respect to theory and design specifications The author focuses on theoretical analysis algorithm design firmware and software designs and subsystem and system testing This book treats system designs with a variety of channel characteristics from very low to optical frequencies This book offers system analysis and subsystem implementation options for acquisition and data detection appropriate to the channel conditions and system specifications and provides test methods for demonstrating system performance This book also Outlines fundamental system requirements and related analysis that must be established prior to a detailed subsystem design Includes many examples that highlight various analytical solutions and case studies that characterize various system performance measures Discusses various aspects of atmospheric propagation using the spherical 4/3 effective earth radius model Examines Ionospheric propagation and uses the Rayleigh fading channel to evaluate link performance using several robust waveform modulations Contains end of chapter problems allowing the reader to further engage with the text Digital Communications with Emphasis on Data Modems is a great resource for communication system and digital signal processing engineers and students looking for in depth theory as well as practical implementations
