## **Intrusion Detection System Using Datamining Techniques:**

*Feature Selection for Intrusion Detection Systems* Kumar Yogesh, Kumar Krishan, Kumar Gulshan, 2014-01 Network security is a serious global concern. The increasing prevalence of malware and incidents of attacks hinders the utilization of the Internet to its greatest benefit and incur significant economic losses. The traditional approaches in securing systems against threats are designing mechanisms that create a protective shield almost always with vulnerabilities. This has created Intrusion Detection Systems to be developed that complement traditional approaches. However, with the advancement of computer technology, the behavior of intrusions has become complex that makes the work of security experts hard to analyze and detect intrusions. In order to address these challenges, data mining techniques have become a possible solution. However, the performance of data mining algorithms is affected when no optimized features are provided. This is because complex relationships can be seen as well between the features and intrusion classes contributing to high computational costs in processing tasks, subsequently leading to delays in identifying intrusions. Feature selection is thus important in detecting intrusions by allowing the data mining system to focus on what is really important.

[Applications of Data Mining in Computer Security](#) Daniel Barbará, Sushil Jajodia, 2002-05-31 Data mining is becoming a pervasive technology in activities as diverse as using historical data to predict the success of a marketing campaign, looking for patterns in financial transactions to discover illegal activities, or analyzing genome sequences. From this perspective, it was just a matter of time for the discipline to reach the important area of computer security. *Applications Of Data Mining In Computer Security* presents a collection of research efforts on the use of data mining in computer security. Data mining has been loosely defined as the process of extracting information from large amounts of data. In the context of security, the information we are seeking is the knowledge of whether a security breach has been experienced and if the answer is yes, who is the perpetrator. This information could be collected in the context of discovering intrusions that aim to breach the privacy of services data in a computer system or alternatively in the context of discovering evidence left in a computer system as part of criminal activity. *Applications Of Data Mining In Computer Security* concentrates heavily on the use of data mining in the area of intrusion detection. The reason for this is twofold. First, the volume of data dealing with both network and host activity is so large that it makes it an ideal candidate for using data mining techniques. Second, intrusion detection is an extremely critical activity. This book also addresses the application of data mining to computer forensics. This is a crucial area that seeks to address the needs of law enforcement in analyzing the digital evidence. *Applications Of Data Mining In Computer Security* is designed to meet the needs of a professional audience composed of researchers and practitioners in industry and graduate level students in computer science.

**Intrusion Detection System Using Datamining Techniques** Shubha Puthran, Ketan Shah, 2012-05 Security is a big issue for all networks including defense and government infrastructure. Attacks on network infrastructure are threats against the information security. The Intrusion detection system (IDS) is one that scans incoming

data activities and attempt to detect the intrusions The classification algorithms in IDS are used to categorize the well known large variety of intrusions In recent years data mining based IDS have executed good performance Still challenges exist in the design and implementation of quality IDSs The goal of this classification and clustering based IDS system is to decrease the False alarm rates and increase the accuracy [Intrusion Detection System Using Data Mining Technique \ Journal of the ACS](#) Naelah Okasha,2010 **Improving Intrusion Detection Systems Using Data Mining Techniques** Abdulrazaq Z.
