A First Course in Systems Biology Eberhard Voit, 2017-09-05 A First Course in Systems Biology is an introduction for advanced undergraduate and graduate students to the growing field of systems biology Its main focus is the development of computational models and their applications to diverse biological systems The book begins with the fundamentals of modeling then reviews features of the molecular inventories that bring biological systems to life and discusses case studies that represent some of the frontiers in systems biology and synthetic biology In this way it provides the reader with a comprehensive background and access to methods for executing standard systems biology tasks understanding the modern literature and launching into specialized courses or projects that address biological questions using theoretical and computational means New topics in this edition include default modules for model design limit cycles and chaos parameter estimation in Excel model representations of gene regulation through transcription factors derivation of the Michaelis Menten rate law from the original conceptual model different types of inhibition hysteresis a model of differentiation system adaptation to persistent signals nonlinear nullclines PBPK models and elementary modes The format is a combination of instructional text and references to primary literature complemented by sets of small scale exercises that enable hands on experience and large scale often open ended questions for further reflection

Aviation Policies Hideki Fukui, 2025-08-19 This book sheds new light on aviation policies unintended effects and consequences especially regarding infrastructure environment and consumer protection The book provides the reader with the first systematic quantitative analyses of the impacts of airlines strategic reactions to the introduction of airport slot markets aviation fuel tax and consumer protection rules Through extensive empirical investigations the author reveals that aviation policies based on the regulations and tax can produce both intended and unintended effects and consequences Although the introduction of airport slot markets was expected to enhance airline competition airlines manipulative behaviors have impeded the slot markets effective functioning Also the aviation fuel tax can reduce emissions in the air transport market effectively but the amount of the reduction of fuel consumption and CO₂ emissions would be smaller in the longer term due to the rebound effect Finally the consumer protection rules e g the tarmac delay rule of the US Department of Transportation DOT significantly reduced tarmac delays however the DOT s investigations of tarmac delay incidents triggered the investigated airlines risk averse behavior which increased flight cancelations and gate departure delays to avoid violating the rule The analyses suggest that the most effective way of regulation depends on conditions unique to each policy area the government should design interventions that circumvent strategic behaviors of subjects or groups that the interventions affect This book is highly relevant to academics and practitioners interested in understanding the interactive effects between policy interventions and firms strategic reactions

Mathematical Statistics with Mathematica Colin Rose, 2002 **Translational Research Methods for Diabetes,**

Obesity and Cardiometabolic Drug Development Andrew J. Krentz, Lutz Heinemann, Marcus Hompesch, 2014-11-29 The world is beset by a pandemic of obesity and type 2 diabetes and the need for new drugs is startlingly clear recent years have seen a huge increase in research activity to fill this gap The development of new drugs for diabetes and obesity must be founded upon a sound appreciation of the pathophysiology of these common disorders The dual defects of insulin resistance and impaired insulin secretion are fundamental to the pathogenesis and progression of obesity associated type 2 diabetes There is a need to explain how new drugs can counter insulin resistance and insulin deficiency to a broad range of professionals from clinical scientists active in early and later phase drug development to specialist physicians and increasingly primary care doctors who must tailor drug regimens to the individual patient Clinical research methods for measuring insulin action and insulin secretion have become well established in proof of mechanism studies however selection of the best techniques is by no means straightforward The purpose of the book is to aid the selection of the most appropriate techniques for assessing insulin action insulin secretion and body composition in humans with particular reference to new drugs in phase 1 and 2 studies and aid the understanding of drug effects and non drug treatment strategies on key biochemical hormonal defects of obesity and type 2 diabetes The book will assume a working knowledge of human physiology relating to glucose metabolism and will be of interest to biomedical scientists pharmacologists academics involved in metabolic research and clinicians practicing in these specialties

The developing human brain Silvia A. Bunge, Elizabeth D. O'Hare, Technological advances in brain imaging genetics and computational modeling have set the stage for novel insights into the cognitive neuroscience of human development during childhood and adolescence As the field has expanded research in this area increasingly incorporates highly interdisciplinary approaches utilizing sophisticated imaging behavioral and genetic methodologies to map brain cognitive and affective social development The articles in this Research Topic will highlight both the recent advances and future challenges inherent in this burgeoning interdisciplinary field We invite both review articles and original research reports that consider any of the broad spectrum of topics within the field of developmental cognitive neuroscience
