MATERIALS SCIENCE AND ENGINEERING :

PROBLEMS WITH SOLUTIONS SHETTY, M.N., 2015-12-01 This book with analytical solutions to 260 select problems is primarily designed for the second year core course on materials science. The treatment of the book reflects the author's experience of teaching this course comprehensively at IIT Kanpur for a number of years to the students of engineering and 5 year integrated disciplines. The problems have been categorised into five sections covering a wide range of solid state properties. Section 1 deals with the dual representation of a wave and a particle and then comprehensively explains the behaviour of particles within potential barriers. It provides solutions to the problems that show how the energy levels of a free atom lead to the formation of energy bands in solids. The statistics of the distribution of particles in different energy states in a solid has been detailed leading to the derivation of Maxwell Boltzmann, Bose Einstein and Fermi Dirac statistics and their mutual relationships. Quantitative derivation of the Fermi energy has been obtained by considering free electron energy distribution in solids and then considering Fermi Dirac distribution as a function of temperature. The derivation of the Richardson's equation and the related work function has been quantitatively dealt with. The phenomenon of tunnelling has been dealt with in terms of quantum mechanics, whereas the band structure and electronic properties of materials are given quantitative treatment by using Fermi Dirac distribution function. Section 2 deals with the nature of the chemical bonds, types of bonds and their effect on properties, followed by a detailed presentation of crystal structures of some common materials and a discussion on the structures of C60 and carbon nanotubes. Coordination and packing in crystal structures are considered next, followed by a detailed X-ray analysis of simple crystal structures, imperfections in crystals, diffusion, phase equilibria and mechanical behaviour. Section 3 deals with thermal and electrical properties and their mutual relationships. Calculations of Debye frequency, Debye temperature and Debye specific heat are presented in great detail. A brief section on superconductivity considers both the conventional and the high TC superconductors. Sections 4 and 5 deal with magnetic and dielectric materials, considering magnetic properties from the point of view of the band theory of solids. Crystal structures of some common ferrites are given in detail. Similarly, the displacement characteristics in dielectrics are considered from their charge displacements, giving rise to some degree of polarization in the materials. RATE

PROCESSES IN METALLURGY, REVISED EDITION MOHANTY, A. K., 2009-06-08 Primarily intended for the undergraduate students of metallurgical engineering, this book provides a firm foundation for the study of the fundamental principles of transport processes and kinetics of the chemical reactions that greatly help in carrying out a complete analysis of the rate processes in metallurgy. Systematically organized in eight chapters, the book provides a comprehensive treatment and balanced coverage of topics such as kinetic properties of fluids, heat transfer, mass transfer, techniques of dimensional analysis, treatment of transport problems by means of the boundary layer theory, reaction kinetics, and also makes a study of

simultaneous transfer of heat mass and momentum for various metallurgical phenomena Every major concept introduced is worked out through suitable solved examples to a numerical conclusion In addition each chapter concludes with a wide variety of review questions and problems to aid further understanding of the subject

ENGINEERING MATERIALS
BHARGAVA, A. K.,2012-07-24 This text now in its second edition continues to provide a balanced practical treatment of polymers ceramics and composites covering all their physical properties as well as applications in industry The text puts emphasis on developing an understanding of properties characteristics and specifications of non metallic engineering materials and focusing on the techniques for controlling their properties during processing It provides students with the knowledge they need to make optimal selection and use of these materials in a variety of manufacturing applications The book focuses on structure properties correlation of materials as it forms the basis for predicting their behaviour during processing and service conditions The text also discusses the recently developed advanced materials Each chapter includes the questions of fundamental importance and industrial significance along with their answers This book is especially designed for Metallurgical and Materials Science students for a course in non metallic engineering materials Besides it should prove useful for the students of other engineering disciplines where materials science materials engineering is offered as a compulsory course

NEW TO THIS EDITION Addition of a new chapter on Ceramics A Material for Biomedical Applications Chapter 5 Inclusion of a number of questions and their answers in Chapters 2 3 and 4 modifications of existing figures and the inclusion of new ones Incorporation of plenty of numerical problem related to polymers ceramics and composites

Men of Metals and Materials: My Memoirs Gopal S. Upadhyaya,2011-05-25 The book is first in English language highlighting the memoirs of a world renowned powder metallurgist The author who is widely travelled has had intimate interactions with eminent materials scientists and technologists for many many years Many are no more alive and the book gives a rare chance to know not only their scientific achievements but also the social aspects of the interaction It is written in a narrative style In some cases many interesting episodes have been highlighted which otherwise would have remained obscure In all 36 Indian and 47 overseas persons of eminence are covered in the book In addition numerous persons have been mentioned in the side line
