FPGA-Based Software-Defined Radio and Its Real-Time Implementation Using NI-USRP Nikhil Marriwala,2017

In this chapter we propose a novel design of scalable and real time data acquisition software architecture for software defined radio SDR using universal software radio peripheral USRP The software has been designed and tested in multi thread model using LabVIEW which guarantees real time performance and efficiency With the help of this design we have been able to improve the stability of the system besides providing a reconfigurable and flexible architecture Wireless transfer of sensitive data using communication is not a very safe option In this chapter we aim to provide a safe and private wireless transmission between two terminals using the SDR approach and verifying the results in real world environment with the use of USRP The novel design being presented here can be used to transfer random data text or an image encoded with different forward error correction FEC codes which is then verified at the receiving terminal and then decoded accordingly to produce the desired result
