North Carolina State Crime Laboratory Physical Evidence:

Crime Lab Report John M. Collins, 2019-09-17 Crime Lab Report compiles the most relevant and popular articles that appeared in this ongoing periodical between 2007 and 2017. Articles have been categorized by theme to serve as chapters with an introduction at the beginning of each chapter and a description of the events that inspired each article. The author concludes the compilation with a reflection on Crime Lab Report, the retired periodical, and the future of forensic science as the 21st Century unfolds. Intended for forensic scientists, prosecutors, defense attorneys, and even students studying forensic science or law, this compilation provides much needed information on the topics at hand. Presents a comprehensive look behind the curtain of the forensic sciences from the viewpoint of someone working within the field. Educates practitioners and laboratory administrators providing talking points to help them respond intelligently to questions and criticisms whether on the witness stand or when meeting with politicians and or policymakers. Captures an important period in the history of forensic science and criminal justice in America.

Forensic Science and the Administration of Justice Kevin J. Strom, Matthew J. Hickman, 2014-04-04. Uniting forensics, law, and social science in meaningful and relevant ways. Forensic Science and the Administration of Justice by Kevin J. Strom and Matthew J. Hickman is structured around current research on how forensic evidence is being used and how it is impacting the justice system. This unique book, written by nationally known scholars in the field, includes five sections that explore the demand for forensic services, the quality of forensic services, the utility of forensic services, post-conviction forensic issues, and the future role of forensic science in the administration of justice. The authors offer policy-relevant directions for both the criminal justice and forensic fields and demonstrate how the role of the crime laboratory in the American justice system is evolving in concert with technological advances as well as changing demands and competing pressures for laboratory resources.

CHILD ABUSE INVESTIGATION Donald A. Hayden, 2016-12-02. For investigators, the emphasis of traditional forensics, the science of the crime scene, has resulted in the loss of deductive reasoning skills. This book centers on the investigator's ability to interpret and identify non-traditional cues and clues, oftentimes seemingly innocent actions, through the investigator's deductive reasoning skills. If the investigator can interpret these items and understand their evidentiary value and how this information becomes evidence of the crime itself, an investigation is more likely to have a positive outcome. Separated into five sections, the first section defines the roles, goals, and outcomes. The next section pertains to the psychological aspects of the parties involved, including the victim, the suspect, and the non-offending parents. The third section concentrates on the investigation. This section addresses and discusses court rulings and significant cases, e.g., Crawford v. Washington. This is followed with interview methodologies and some leading interview guidelines. The crime scene is discussed in the next section. The fourth section

reviews the court process and the final section addresses the impact of long term exposure to child abuse on team members The book includes chapter summaries and numerous actual case examples of some of the more well known and high profile investigations At the end of each chapter is a list of key terms along with critical thinking questions for the reader to analyze and provide answers to the presented problems The book will be an invaluable resource to law enforcement child protective services medical personnel courts and child advocates

Inside the Cell Erin E. Murphy,2015-10-06 a version less likely to play out on dramatic television shows In Inside the Cell Erin Murphy shows how DNA typing can be subject to misuse mistake and error and lead to a police state run amok Murphy shows the perils of a society in which stop and frisk becomes stop and spit or in which police pose undercover to get a DNA sample from your discarded lunch Already police can collect DNA when making an arrest sometimes before charging a person with a crime The government is building a massive DNA database stockpiling samples from as much as a third of the male population and the laws regulating what they can and cannot do with them are weak Murphy shows how this invites the riskiest kind of genetic surveillance imaginable Just because DNA testing is good science does not mean that it is foolproof Faulty forensic science is the number two factor leading to wrongful conviction and yet we have done little to improve the use of science in criminal justice
